

PHARMACEUTICAL WASTE MANAGEMENT

EnSafe Inc.'s expertise in hazardous waste management includes experience in the disposal, storage, and management of pharmaceutical wastes.

EnSafe has assisted pharmaceutical industry clients and medical facilities with management of hazardous wastes, including both over-the-counter and prescription drugs and their components, such as dyes, alcohol, and fungicides, to name a few.

EnSafe's staff includes Certified Hazardous Materials Managers (CHMMs) and Healthcare Environmental Managers (HEMs) who are well-versed in hazardous materials management and disposal issues, including data management for reporting and tracking purposes. Our relevant healthcare-related experience includes projects such as hazardous materials inventories and pollution prevention/waste stream auditing at various private and U.S. Navy healthcare facilities.

We also advise and provide training on compliance with U.S. Department of Transportation/IATA services including training on material identification and classification, marking and labeling procedures, packaging, documentation, and site security issues; product identification and classification assistance, development of marking and labeling procedures, and assisting with packaging certifications and testing.

EnSafe also advises pharmaceutical clients on compliance with U.S. Environmental Protection Agency regulations; these services include:

- Spill prevention, control, and countermeasures
- Pollution prevention
- Hazardous Substance Management Systems (HSMS)
- Release evaluation
- Air pollution
- Hazardous waste generation, storage, and disposal
- Environmental Management Systems (ISO 14000)
- Characterization as hazardous waste

EnSafe has provided these services to clients across the U.S., from the East Coast to Hawaii and Puerto Rico.
