Waste Description

Common Name of Waste Material: Wash Water

Description of Waste Generating Process: Washing of warehouse services

Waste Characteristics pH: 7 Chemical Composition: Water 98-100%; Dirt 0-2% %

Odor: ☑ none ☐ mild ☐ strong

Describe:

Number of Phases: 1 Color: Dirty Water

Physical state: ☑ liquid ☐ sludge ☐ solid ☐ monolith

Specific gravity: 1.0 % water: >98%

Waste quantity: 5000-10000 ☐ drums ☑ gallons ☐ tons ☐ yards per Event

Generator Certification

Is this waste hazardous as defined in 40 CFR Part 261? ○ Yes ◉ No
Does this waste contain PCB's or other TSCA regulated substances? ○ Yes ◉ No
If this waste is a used oil, have any substances been added to the used oil? ○ Yes ◉ No

If so, what substances?

Is a detailed chemical analysis attached to this characterization form? ◉ Yes ○ No
If no, you must attach either a statement of generator knowledge explaining the waste characteristics or include MSDS's where applicable.

I certify that the above information is true and accurate and that no deliberate or willful omissions of properties exist and that all known hazards have been disclosed.

Waste Description

Common Name of Waste Material: Non Hazardous Cleaners
Description of Waste Generating Process: Outdated material containing OTIS cleaning compound, other non hazardous cleaners

Waste Characteristics pH: 6-8 Chemical Composition: See Above %
Odor: ☑ none ☐ mild ☐ strong
Describe:
Number of Phases: 1 Color: clear/yellow
Physical state: ☑ liquid ☐ sludge ☐ solid ☐ monolith
Specific gravity: NA % water: NA
Waste quantity: 1X55G ☑ drums ☐ gallons ☐ tons ☐ yards per Event

Generator Certification

Is this waste hazardous as defined in 40 CFR Part 261?	○ Yes	◉ No
Does this waste contain PCB's or other TSCA regulated substances?	○ Yes	◉ No
If this waste is a used oil, have any substances been added to the used oil?	○ Yes	◉ No

If so, what substances?

Is a detailed chemical analysis attached to this characterization form? ○ Yes ◉ No
If no, you must attach either a statement of generator knowledge explaining the waste characteristics or include MSDS's where applicable.

I certify that the above information is true and accurate and that no deliberate or willful omissions of properties exist and that all known hazards have been disclosed.

[1] All mercury devices must be packaged in rigid, tightly-sealed, leak-proof containers prior to off-site transport.
[2] Lithium batteries must be packaged separately and all terminals protected. Additional labeling is required.
[3] Batteries must be prepared and packaged for transport in a manner to prevent a dangerous evolution of heat, short circuiting, or damage to terminals via individual packaging of each battery or taping of terminals. Typical battery types include Ni-Cd, Ni-MH, mercury, zinc air, and alkaline batteries.
[4] Per DOT Letter of Clarification Ref. # 09-0295 dated January 8, 2010.

OSHA 8 Hr Permissible Exposure Limit (PEL)

Parameter	PEL
Lead	0.0500 mg/m³ [50.0 µg/m³]

Concentration is based on volumes provided by customer. *RL indicates Reporting Limit. All internal QC parameters were met. Unusual sample conditions, if any, are described. Results are not blank-corrected unless noted by analyst. Exposure calculations are based on customer-supplied information and assume zero exposure for time not sampled. Calculated values are reported to three significant figures. The test results apply to the sample as received.

SCHNEIDER LABORATORIES GLOBAL, INC. TERMS AND CONDITIONS

Schneider Laboratories Global, Inc. ("Schneider", which includes all of Schneider's officers, directors, employees, agents, and all other representatives and/or agents of any kind [collectively, Schneider]) hereby expressly disclaims any and all liability for both any and all indirect and consequential damages which might be asserted or alleged by any person or entity – including but not limited to the person or entity submitting samples for testing its client(s), agents, representatives or third parties [collectively, the Submitting Company] – arising from or in any way relating to Schneider's performance of any and all services – including but not limited to analysis, testing and reporting regarding samples provided by Submitting Company – performed in connection with, or in any way relating to, this Chain-of-Custody form, the samples referenced herein, the Purchase Order referenced herein.

Schneider's liability is hereby expressly limited to the direct cost of correcting any error or omission in the performance of its services (which shall be strictly limited to the direct out-of-pocket cost of correctly performing the specific analyses or tests referenced herein, or the direct out-of-pocket cost of correctly reporting any result of Schneider's work).

By submitting, signing, or initialing this form,

(1) the person submitting, signing, or initialing this form represents and warrants that he is authorized by the Submitting Company, all clients of the Submitting Company, and all other persons or entities who may be affected, to execute this form and all related forms and agreements and to bind all such persons/entities to all terms and conditions set forth herein; and

(2) the Submitting Company hereby represents and warrants that it is authorized by all clients of the Submitting Company, and all other persons or entities who may be affected, to execute this form and all related forms and agreements and to bind all such persons/entities to all terms and conditions set forth herein; and

(3) on behalf of all such clients, persons and entities, the Submitting Company hereby agrees to all terms and conditions set forth herein and expressly waives and releases any and all claims, whether past or future, for indirect or consequential damages as described herein.

Client Project: HR 6964 Closed Loop
EA Group Workorder Number: 211100114
Received on November 11, 2021

The following analytical report contains results as requested for samples submitted to EA Group. The results included in this report have been reviewed for compliance with the analytical methods indicated in this report. All data has been found to be compliant with accepted laboratory protocol, except as noted in the QC narrative. Industrial hygiene reports, air and/or surface concentrations results are based upon sampling information provided by the client. Analyst initials of REF indicate analysis performed at a subcontract facility.

If you have questions, comments or require further assistance regarding this report, please contact your client services representative or one of the individuals listed below.

Data or reporting:

EA GROUP
Environmental Analysis and Management

Project Narrative
2111-00114

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 25°C.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

Received on January 20, 2022

The following analytical report contains results as requested for samples submitted to EA Group. The results included in this report have been reviewed for compliance with the analytical methods indicated in this report. All data has been found to be compliant with accepted laboratory protocol, except as noted in the QC narrative. Industrial hygiene reports, air and/or surface concentrations results are based upon sampling information provided by the client. Analyst initials of REF indicate analysis performed at a subcontract facility.

If you have questions, comments or require further assistance regarding this report, please contact your client services representative or one of the individuals listed below.

EA GROUP
Environmental Analysis and Management

Project Narrative
2201-00204

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 25°C.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

EA GROUP
Environmental Analysis and Management

Project Narrative
2204-00050

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 25°C.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

Note: Sampling media used is 25mm MCE filter unless otherwise noted.
LOD = Limit Of Detection: The method assumes the lowest quantitative concentration is 7 fibers/mm² of collective filter area and is sample volume dependent. Sample concentrations below the LOD cannot be reliably quantified and should be considered less than the LOD for the sample.

Client Project: HR 6964 Closed Loop
EA Group Workorder Number: 220700078
Received on July 8, 2022

The following analytical report contains results as requested for samples submitted to EA Group. The results included in this report have been reviewed for compliance with the analytical methods indicated in this report. All data has been found to be compliant with accepted laboratory protocol, except as noted in the QC narrative. Industrial hygiene reports, air and/or surface concentrations results are based upon sampling information provided by the client. Analyst initials of REF indicate analysis performed at a subcontract facility.

If you have questions, comments or require further assistance regarding this report, please contact your client services representative or one of the individuals listed below.

EA GROUP
Environmental Analysis and Management

Project Narrative
2207-00078

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 25°C.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

Note: Sampling media used is 25mm MCE filter unless otherwise noted.
LOD = Limit Of Detection: The method assumes the lowest quantitative concentration is 7 fibers/mm² of collective filter area and is sample volume dependent. Sample concentrations below the LOD cannot be reliably quantified and should be considered less than the LOD for the sample.

Dear Mr. Goodman:

Enclosed are the analytical results for the samples received by our laboratory on September 30, 2021. All samples on the chain of custody were received in good condition unless otherwise noted. Any additional observations will be noted on the chain of custody.

Please contact client services at (888) 432-5227 if you would like any additional information regarding this report. Thank you for using SGS Galson.

Sincerely,

SGS Galson

Lisa Swab
Laboratory Director

Enclosure(s)

COMMENT ANNEX

Please note that only one matched weight filter was present in the submitted matched weight cassettes. The requested Total Dust analysis could not be performed.

Terms and Conditions & General Disclaimers

- This document is issued by the Company under its General Conditions of Service accessible at http://www.sgs.com/en/Terms-and-Conditions.aspx. Attention is drawn to the limitation of liability, indemnification and jurisdiction issues defined therein.

- Any holder of this document is advised that information contained herein reflects the Company's findings at the time of its intervention only and within the limits of Client's instructions, if any. The Company's sole responsibility is to its Client and this document does not exonerate parties to a transaction from exercising all their rights and obligations under the transaction documents. Any unauthorized alteration, forgery or falsification of the content or appearance of this document is unlawful and offenders may be prosecuted to the fullest extent of the law.

Analytical Disclaimers

- Unless otherwise noted within the report, all quality control results associated with the samples were within established control limits or did not impact reported results.

- Note: The findings recorded within this report were drawn from analysis of the sample(s) provided to the laboratory by the Client (or a third party acting at the Client's direction). The laboratory does not have control over the sampling process, including but not limited to the use of field equipment and collection media, as well as the sampling duration, collection volume or any other collection parameter used by the Client. The findings herein constitute no warranty of the sample's representativeness of any sampled environment, and strictly relate to the samples as they were presented to the laboratory. For recommended sampling collection parameters, please refer to the Sampling and Analysis Guide at www.sgsgalson.com.

- Unrounded results are carried through the calculations that yield the final result and the final result is rounded to the number of significant figures appropriate to the accuracy of the analytical method. Please note that results appearing in the columns preceding the final result column may have been rounded and therefore, if carried through the calculations, may not yield an identical final result to the one reported.

- The stated LOQs for each analyte represent the demonstrated LOQ concentrations prior to correction for desorption efficiency (if applicable).

- Unless otherwise noted within the report, results have not been blank corrected for any field blank or method blank data.

Accreditations SGS Galson holds a variety of accreditations and recognitions. Our quality management system conforms with the requirements of ISO/IEC 17025. Where applicable, samples may also be analyzed in accordance with the requirements of ELAP, NELAC, or LELAP under one of the state accrediting bodies listed below. Current Scopes of Accreditation can be viewed at http://www.sgsgalson.com in the accreditations section of the "About" page. To determine if the analyte tested falls under our scope of accreditation, please visit our website or call Client Services at (888) 432-5227.

EA Group Workorder Number: 211200226
Received on December 20, 2021

The following analytical report contains results as requested for samples submitted to EA Group. The results included in this report have been reviewed for compliance with the analytical methods indicated in this report. All data has been found to be compliant with accepted laboratory protocol, except as noted in the QC narrative. Industrial hygiene reports, air and/or surface concentrations results are based upon sampling information provided by the client. Analyst initials of REF indicate analysis performed at a subcontract facility.

If you have questions, comments or require further assistance regarding this report, please contact your client services representative or one of the individuals listed below.

EA GROUP
Environmental Analysis and Management

Project Narrative
2112-00226

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 10.9°C.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

Project Narrative
2202-00213

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 25°C.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

Project Narrative
2204-00048

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 6.1°C. Samples were transported with ice packs.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

Client Project: HR6964 Closed Loop
EA Group Workorder Number: 220600215
Received on June 13, 2022

The following analytical report contains results as requested for samples submitted to EA Group. The results included in this report have been reviewed for compliance with the analytical methods indicated in this report. All data has been found to be compliant with accepted laboratory protocol, except as noted in the QC narrative. Industrial hygiene reports, air and/or surface concentrations results are based upon sampling information provided by the client. Analyst initials of REF indicate analysis performed at a subcontract facility.

If you have questions, comments or require further assistance regarding this report, please contact your client services representative or one of the individuals listed below.

Data or reporting:

EA GROUP
Environmental Analysis and Management

Project Narrative
2206-00215

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 13.6°C. Samples were received on wet ice.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

The following analytical report contains results as requested for samples submitted to EA Group. The results included in this report have been reviewed for compliance with the analytical methods indicated in this report. All data has been found to be compliant with accepted laboratory protocol, except as noted in the QC narrative. Industrial hygiene reports, air and/or surface concentrations results are based upon sampling information provided by the client. Analyst initials of REF indicate analysis performed at a subcontract facility.

If you have questions, comments or require further assistance regarding this report, please contact your client services representative or one of the individuals listed below.

Environmental Analysis and Management

Project Narrative
2207-00080

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 26.2°C.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

EA GROUP
Environmental Analysis and Management

Project Narrative
2206-00215

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 13.6°C. Samples were received on wet ice.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

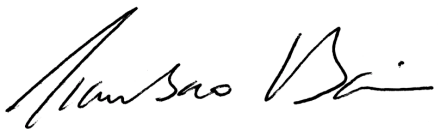
November 22, 2021

Hepa Environmental Services, Inc.
5130 Tallmadge Rd
Rootstown, OH 44272

CLIENT PROJECT: Closed Loop, HR 6964
CEI LAB CODE: B2111902



Dear Customer:

Enclosed are asbestos analysis results for PLM Bulk samples received at our laboratory on November 22, 2021. The samples were analyzed for asbestos using polarizing light microscopy (PLM) per the EPA 600 Method.

Sample results containing >1% asbestos are considered asbestos-containing materials (ACMs) per EPA regulatory requirements. The detection limit for the EPA 600 Method is <1% asbestos by weight as determined by visual estimation.

Thank you for your business and we look forward to continuing good relations.

Kind Regards,

Tianbao Bai, Ph.D., CIH
Laboratory Director

REPORTING LIMIT: <1% by visual estimation

REPORTING LIMIT FOR POINT COUNTS: 0.25% by 400 Points or 0.1% by 1,000 Points

REGULATORY LIMIT: >1% by weight

Due to the limitations of the EPA 600 method, nonfriable organically bound materials (NOBs) such as vinyl floor tiles can be difficult to analyze via polarized light microscopy (PLM). EPA recommends that all NOBs analyzed by PLM, and found not to contain asbestos, be further analyzed by Transmission Electron Microscopy (TEM). Please note that PLM analysis of dust and soil samples for asbestos is not covered under NVLAP accreditation. *Estimated measurement of uncertainty is available on request.*

This report relates only to the samples tested or analyzed and may not be reproduced, except in full, without written approval by Eurofins CEI. Eurofins CEI makes no warranty representation regarding the accuracy of client submitted information in preparing and presenting analytical results. Interpretation of the analytical results is the sole responsibility of the client. Samples were received in acceptable condition unless otherwise noted. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. Government.

Information provided by customer includes customer sample ID and sample description.

EA Group Workorder Number: 220100282
Received on January 28, 2022

The following analytical report contains results as requested for samples submitted to EA Group. The results included in this report have been reviewed for compliance with the analytical methods indicated in this report. All data has been found to be compliant with accepted laboratory protocol, except as noted in the QC narrative. Industrial hygiene reports, air and/or surface concentrations results are based upon sampling information provided by the client. Analyst initials of REF indicate analysis performed at a subcontract facility.

If you have questions, comments or require further assistance regarding this report, please contact your client services representative or one of the individuals listed below.

Project Narrative
2201-00282

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 25°C.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

Listed below are the TCLP regulatory limits. If you have any questions regarding the results or the regulatory limits, please contact Client Services. Source: 40CFR 261.

TCLP Metals:	**mg/liter**
Arsenic	5.0
Barium	100.0
Cadmium	1.0
Chromium	5.0
Lead	5.0
Mercury	0.2
Selenium	1.0
Silver	5.0

TCLP Semi-volatiles:	**mg/liter**
1,4-Dichlorobenzene	7.5
2,4-Dinitrotoluene	0.13
Hexachlorobenzene	0.13
Hexachlorobutadiene	0.5
Hexachloroethane	3.0
Nitrobenzene	2.0
Pyridine	5.0
o-Cresol	200.0
m-Cresol	200.0
p-Cresol	200.0
Cresol (total)	200.0
Pentachlorophenol	100.0
2,4,5-Trichlorophenol	400.0
2,4,6-Trichlorophenol	2.0

Characterization Parameters:	**Acceptable limits**
Corrosivity	2-12.5 pH units
Flashpoint	>140 degrees F
Ignitability (solid burn rate)	<2.2 mm/second
Reactive Cyanide*	<250 mg/kg
Reactive Sulfide*	<500 mg/kg

TCLP Volatiles:	**mg/liter**
Benzene	0.5
Carbontetrachloride	0.5
Chlorobenzene	100.0
Chloroform	6.0
1,2-Dichloroethane	0.5
1,1-Dichloroethene	0.7
Methyl ethyl ketone	200.0
Tetrachloroethene	0.7
Trichloroethene	0.5
Vinyl Chloride	0.2

TCLP Pesticides:	**mg/liter**
Chlordane	0.03
Endrin	0.02
Heptachlor	0.008
Heptachlor Epoxide	0.008
Lindane	0.4
Methoxychlor	10.0
Toxaphene	0.5

TCLP Herbicides:	**mg/liter**
2,4-D	10.0
2,4,5-TP (Silvex)	1.0

* EA Group uses the industry standard for the analysis of reactivity. However, the EPA has withdrawn guidance concerning this method. Further evaluation may be required to determine whether a waste is 'reactive'. The generator should contact the waste handler or the EPA for further guidance.

Re: Partial Inspection for Asbestos-Containing Materials
1675 Watkins Road, Columbus, Ohio
Project Number GA21-161

Dear Mr. Kuhlman:

Per your email (dated November 22, 2021) and in accordance with Asbestos Hazard Emergency Response Act (AHERA), we performed a partial inspection for asbestos-containing materials of gypsum board wall systems associated with the Glass Crusher Room which will be removed during an upcoming renovation project at 1675 Watkins Road, Columbus, Ohio. As noted on attached Bulk Sample Record, samples of gypsum board wall systems were analyzed and **found not to contain asbestos.**

We have provided enclosed bulk sample records to present our asbestos findings. Locations of procured samples are designated on bulk sample records. Bulk sample records characterize suspect materials in terms of sampling areas. A sampling area provides a way of characterizing material possibly containing asbestos in terms of its visual characteristics, location in a facility, date of installation, and constituents as determined by laboratory analyses of samples. Bulk sample locations were determined randomly.

When we conclude either that a material is or is not an asbestos-containing material (ACM), based on laboratory analyses of samples, we are stating that there is likelihood that constituents of suspect material are accurately characterized by samples procured. We cannot conclude categorically that sampled material is represented by analyzed samples. If one sample of material from a homogeneous area is found to be ACM, the material is judged to be ACM. However, if sampling and laboratory analyses indicate that no asbestos was detected, we cannot guarantee that this material is asbestos-free.

Laboratory reports for analyzed samples, signatures of laboratory technician(s) who analyzed samples, laboratory accreditation information, and credentials of Inspector are enclosed with this letter. Copies of this Report should be kept on site during renovation work.

Should you have any questions, please do not hesitate to contact us.

Sincerely,

Dennis Olive

Date Received: 12/2/2021
Date Reported: 12/3/2021

Sample ID *Lab Sample ID*	Description *Lab Notes*	Asbestos	Fibrous Components	Non-Fibrous Components	Attributes Treatment
21-161-01-1001 *71980674PLM_1*	Gypsum board and compound *drywall: none detect; joint compnd: none detect*	None Detected	15% Cellulose	85% Other	White, Grayish Non Fibrous Heterogeneous Crushed
21-161-01-1002 *71980674PLM_2*	Gypsum board and compound *drywall: none detect; joint compnd: none detect*	None Detected	15% Cellulose	85% Other	White, Grayish Non Fibrous Heterogeneous Crushed
21-161-01-1003 *71980674PLM_3*	Gypsum board and compound *drywall: none detect; joint compnd: none detect*	None Detected	15% Cellulose	85% Other	White, Grayish Non Fibrous Heterogeneous Crushed

Disclaimer: Due to the nature of the EPA 600 method, asbestos may not be detected in samples containing low levels of asbestos. We strongly recommend that analysis of floor tiles, vermiculite, and/or heterogeneous soil samples be conducted by TEM for confirmation of "None Detected" by PLM. This report relates only to the samples tested and may not be reproduced, except in full, without the written approval of SAI. This report may not be used by the client to claim product endorsement by NVLAP or any other agency of the U.S. government. Analytical uncertainty available upon request. Scientific Analytical Institute participates in the NVLAP Proficiency Testing program. Unless otherwise noted blank sample correction was not performed. Estimated MDL is 0.1%.

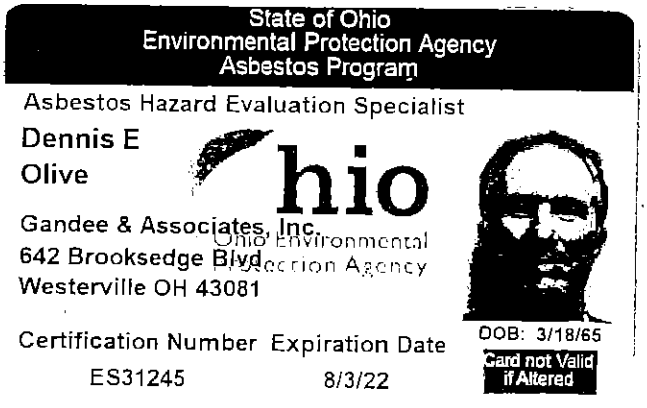
RE: Evaluation Specialist
Certification Number: ES31245
Expiration Date: 8/3/2022

Dear Dennis Olive:



This letter and enclosed certification card approves your request to be certified as an asbestos Evaluation Specialist. You must present your card upon request at any project site while performing duties. Copies of cards are not acceptable as proof of certification.

This certification may be revoked by the Director of the Ohio Environmental Protection Agency (EPA) for violation of any of the requirements of 3745-22 or 3745-20 of the Ohio Administrative Code.

If you have any questions, please contact the Asbestos Program at 614-644-0226 or by email at asbestoslicensing@epa.ohio.gov.

Sincerely,

Joshua S. Koch
Manager, Business Operations Support Section
Ohio EPA - Division of Air Pollution Control

Received on August 19, 2022

The following analytical report contains results as requested for samples submitted to EA Group. The results included in this report have been reviewed for compliance with the analytical methods indicated in this report. All data has been found to be compliant with accepted laboratory protocol, except as noted in the QC narrative. Industrial hygiene reports, air and/or surface concentrations results are based upon sampling information provided by the client. Analyst initials of REF indicate analysis performed at a subcontract facility.

If you have questions, comments or require further assistance regarding this report, please contact your client services representative or one of the individuals listed below.

EA GROUP
Environmental Analysis and Management

Project Narrative
2208-00237

All analyses performed by EA Group were done using established laboratory SOPs. Management has reviewed the data for compliance with the laboratory QA/QC plan and data have been found to be compliant with the laboratory protocols unless otherwise noted below. All results listed for this report relate only to the samples submitted on this work order.

The temperature of the sample(s) upon receipt was 3.7°C. Samples were transported with ice packs. The TCLP Analysis was cancelled by the client.

Misc. QC Comments

Percent Moisture is used to report results on a dry weight basis.

When necessary, reporting limits of individual samples may be raised due to high concentration of interfering compounds or target analytes, or quantity of sample available for analysis.

pH method note: If this analysis was performed in the laboratory, it may not meet the "immediate analysis" requirement that applies to most wastewater monitoring samples. In such cases, analysis for pH should be done at the time of sampling.

The results listed in this report relate only to the samples submitted to EA Group per the chain of custody.

Data Flag Table

B	The method blank contained a standard laboratory contaminant (Methylene Chloride, Acetone, Hexane, Phthalates, etc.) above the standard laboratory method detection limit. If the analyte is present in the sample at a concentration up to ten times the blank level, the result is reported with a "B" indicating method blank contamination. Samples will be reported without a "B" if the analyte concentration in the sample is greater than ten times the blank level.
E	An analytical result marked with an "E" indicates the result reported is above the high end limit of the calibration curve and should be considered an estimated concentration.
DIL	Due to matrix interference or high analyte concentration, a dilution was required. The spikes and/or surrogates results could not be quantitated and therefore marked "DIL".
J	An analytical result marked with a "J" indicates the result reported was below the standard reporting limit and above the method detection limit. As the observed level approaches the MDL there is an increasing probability of a false positive response.
MI	Analytical results marked as "MI" indicate that due to inherent matrix interference, the result could not be quantitated.
#	Results flagged "#" indicate the reported result may be outside allowable permit levels as provided by the client, when applicable.
NA	A result or field marked as "NA" indicates that it was not applicable for this project.
Q	A quality control result flagged with a "Q" indicates the percent recovery was outside the acceptable range as determined by the laboratory.

** Positive results for this analyte represent a probable combination of 3-Methylphenol (m-Cresol) and 4-Methylphenol (p-Cresol).

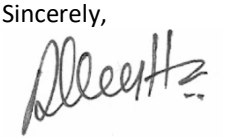
Re: EPCRA Sections 302 and 311 Notification – Closed Loop Refining & Recovery

Attn: SERC

The purpose of this letter is to submit an initial notification of hazardous chemicals at the former Closed Loop Refining & Recovery warehouses at 1655 and 1675 Watkins Road, in Columbus, Ohio, to satisfy the requirements of EPCRA Sections 302 and 311.



Please see below the information relevant to the hazardous chemicals, facility operations, and emergency personnel at this facility:

Facility Name: Closed Loop Refining & Recovery
Facility Address: 1655 and 1675 Watkins Road
Columbus, Ohio 43207
Emergency Contact: Venky Venkatesh, On-Scene Coordinator
24 Hour Phone Number: 216-235-8613
Email: vvenkatesh@ensafe.com
NAICS Code: 42393 – RECYCLABLE MATERIAL MERCHANT WHOLESALERS (as reported by Closed Loop Refining & Recovery)

Hazardous Chemical	Amount Stored	Location	Associated Hazards
Electric Storage Batteries (Mixture) Sulfuric Acid (7664-93-9) Lead (7439-92-1)	 837 Pounds 12,384 Pounds	**Battery charging station** (west side 1675 Watkins, south of office area) **Four electric tow motors** throughout building	Explosive; Flammable (gases, aerosols, liquids, or solids); Acute toxicity (any route of exposure); Skin corrosion or irritation; Serious eye damage or eye irritation; Carcinogenicity; Reproductive toxicity; Specific target organ toxicity (single or repeated exposure)

Attached is a representative Safety Data Sheet for the electric storage batteries used at the facility. If you require additional information or have questions about this notification, please contact me.

Sincerely,

Venky Venkatesh
On-Scene Coordinator

ATTACHMENT A: Electric Storage Battery Safety Data Sheet

Industrial Lead Acid Battery GHS SDS

Revision # 1.0 *05/11/15*

1. IDENTIFICATION

Product Name: Lead Acid Battery, Wet **Synonyms:** Industrial Battery, Traction Battery, Stationary Battery, Deep Cycle Battery **Product Use**: Electric Storage Battery	**Manufacturer:** Bulldog Battery Corporation 387 South Wabash Street, Wabash, IN 46992
General Information Number: (800) 443-3492 **Transportation Emergency Number:**	**CAS Number:** Not Applicable **800-443-3492** **www.bulldog-battery.com**

2. GHS HAZARDS IDENTIFICATION

Health	Environmental	Physical
Acute Toxicity (Oral/Dermal/Inhalation) - Category 4 Skin Corrosion/Irritation - Category 1A Eye Damage - Category 1 Reproductive - Category 1A Carcinogenicity (lead) - Category 1B Carcinogenicity (acid mist) - Category 1A Specific Target Organ Toxicity (repeated exposure) - Category 2	Aquatic Chronic 1 Aquatic Acute 1	Explosive Chemical, Division 1.3

GHS Label:

Health	Environmental	Physical
		
Hazard Statements **DANGER!** Causes severe skin burns and eye damage. Causes serious eye damage. May damage fertility or the unborn child if ingested or inhaled. May cause cancer if ingested or inhaled. Causes damage to central nervous system, blood and kidneys through prolonged or repeated exposure. May form explosive air/gas mixture during charging. Extremely flammable gas (hydrogen). Explosive, fire, blast or projection hazard.	***Precautionary Statements*** Wash thoroughly after handling. Do not eat, drink or smoke when using this product. Wear protective gloves/protective clothing, eye protection/face protection. Avoid breathing dust/fume/gas/mist/vapors/spray. Use only outdoors or in a well-ventilated area. Causes skin irritation, serious eye damage. Contact with internal components may cause irritation or severe burns. Avoid contact with internal acid. Irritating to eyes, respiratory system, and skin.	

3. COMPOSITION / INFORMATION ON INGREDIENTS

INGREDIENTS (Chemical/Common Names):	CAS No.:	Average % by Weight:
Lead and Lead Compounds (inorganic)	7439-92-1	52%
Electrolyte (H_2SO4/H_2O)	7664-93-9	12%
Antimony	7440-36-0	1.3%
Polypropylene	9003-07-0	7.5%
Other Ingredients		27.2%

4. FIRST AID MEASURES

INHALATION:
Sulfuric Acid: Remove to fresh air immediately. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. Consult a physician.
Lead: Remove from exposure, gargle, wash nose and lips; consult physician.

INGESTION:
Sulfuric Acid: Give large quantities of water; Do NOT induce vomiting or aspiration into the lungs may occur and can cause permanent injury or death; consult physician.
Lead: Consult physician immediately.

SKIN:
Sulfuric Acid: Flush with large amounts of water for at least 15 minutes; remove contaminated clothing completely, including shoes. If symptoms persist, seek medical attention. Wash contaminated clothing before reuse. Discard contaminated shoes.
Lead: Wash immediately with soap and water.

EYES:
Sulfuric Acid and Lead: Flush immediately with large amounts of water for at least 15 minutes while lifting lids; Seek immediate medical attention if eyes have been exposed directly to acid.

5. FIRE FIGHTING MEASURES

Flash Point: Not Applicable
Flammable Limits: LEL = 4.1% (Hydrogen Gas in air); UEL = 74.2%
Extinguishing media: CO_2; foam; dry chemical. Do not use carbon dioxide directly on cells. Avoid breathing vapors. Use appropriate media for surrounding fire.

Fire Fighting Procedures:
Use positive pressure, self-contained breathing apparatus. Beware of acid splatter during water application and wear acid-resistant clothing, gloves, face and eye protection. If batteries are on charge, shut off power to the charging equipment, but note that strings of series connected batteries may still pose risk of electric shock even when charging equipment is shut down.

Hazardous Combustion Products:
Highly flammable hydrogen gas is generated during charging and operation of batteries. If ignited by burning cigarette, naked flame or spark, may cause battery explosion with dispersion of casing fragments and corrosive liquid electrolyte. Keep away all sources of gas ignition and do not allow metallic articles to simultaneously

contact the negative and positive terminals of a battery. Carefully follow manufacturer's instructions for installation and service.

6: ACCIDENTAL RELEASE MEASURES

Stop flow of material; contain/absorb small spills with dry sand, earth or vermiculite. Do not use combustible materials. If possible, carefully neutralize spilled electrolyte with soda ash, sodium bicarbonate, lime, etc. Wear acid-resistant clothing, boots, gloves, and face shield. Do not allow discharge of un-neutralized acid to sewer. Acid must be managed in accordance with approved local, state, and federal requirements. Consult state environmental agency and/or federal EPA.

7. HANDLING AND STORAGE

Handling:

Unless involved in recycling operations, do not breach the casing or empty the contents of the battery. Handle carefully and avoid tipping, which may allow electrolyte leakage. There may be increased risk of electric shock from strings of connected batteries. Keep containers tightly closed when not in use. If battery case is broken, avoid contact with internal components. Keep vent caps on and cover terminals to prevent short circuits. Place cardboard between layers of stacked automotive batteries to avoid damage and short circuits. Keep away from combustible materials, organic chemicals, reducing substances, metals, strong oxidizers and water. Use banding or stretch wrap to secure items for shipping.

Storage:

Store batteries under roof in cool, dry, well-ventilated areas separated from incompatible materials and from activities that may create flames, spark, or heat. Store on smooth, impervious surfaces provided with measures for liquid containment in the event of electrolyte spills. Keep away from metallic objects that could bridge the terminals on a battery and create a dangerous short-circuit.

Charging:

There is a possible risk of electric shock from charging equipment and from strings of series connected batteries, whether or not being charged. Shut-off power to chargers whenever not in use and before detachment of any circuit connections. Batteries being charged will generate and release flammable hydrogen gas. Charging space should be ventilated. Keep battery vent caps in position. Prohibit smoking and avoid creation of flames and sparks nearby. Wear face and eye protection when near batteries being charged.

8. EXPOSURE CONTROLS / PERSONAL PROTECTION Exposure Limits (mg/m^3) Note: N.E. = Not Established

INGREDIENTS (Chemical/Common Names):	OSHA PEL	ACGIH	US NIOSH	Quebec PEV	Ontario OEL	EU OEL
Lead and Lead Compounds (inorganic)	0.05	0.05	0.05	0.05	0.05	0.15 (b)
Electrolyte (H_2SO_4/H_2O)	1	0.2	1	1	0.2	0.05 (c)
Antimony	0.5	0.5	0.5	0.5	0.5	0.5 (b,e)
Polypropylene	N.E.	N.E.	N.E.	N.E.	N.E.	N.E.

NOTES:

(a) As dusts/mists **(b)**As inhalable aerosol **(c)**Thoracic fraction **(d)**Potential occupational carcinogen
(e) Based on OEL's of Austria, Belgium, Denmark, France, Netherlands, Switzerland, & U.K.
(f) Based on OEL of Belgium

Engineering Controls (Ventilation):
Store and handle in well-ventilated area. If mechanical ventilation is used, components must be acid-resistant. Handle batteries cautiously, do not tip to avoid spills. Make certain vent caps are on securely. If battery case is damaged, avoid bodily contact with internal components. Wear protective clothing, eye and face protection, when filling, charging or handling batteries. Do not allow metallic materials to simultaneously contact both the positive and negative terminals of the batteries. Charge batteries in areas with adequate ventilation. General dilution ventilation is acceptable.

Respiratory Protection (NIOSH/MSHA approved):
None required under normal conditions. When concentrations of sulfuric acid mist are known to exceed PEL, use NIOSH or MSHA-approved respiratory protection.

Skin Protection:
If battery case is damaged, use rubber or plastic acid-resistant gloves with elbow-length gauntlet, acid-resistant apron, clothing and boots.

Eye Protection:
If battery case is damaged, use chemical goggles or face shield.

Other Protection:
In areas where water and sulfuric acid solutions are handled in concentrations greater than 1%, emergency eyewash stations and showers should be provided, with unlimited water supply. Chemically impervious apron and face shield recommended when adding water or electrolyte to batteries. Wash Hands after handling.

9. PHYSICAL AND CHEMICAL PROPERTIES

Properties Listed Below are for Electrolyte:			
Boiling Point:	**203 - 240° F**	Specific Gravity (H2O = 1):	**1.215 to 1.350**
Melting Point:	**N/A**	Vapor Pressure (mm Hg):	**10**
Solubility in Water:	**100%**	Vapor Density (AIR = 1):	**Greater than 1**
Evaporation Rate: (Butyl Acetate = 1)	**Less than 1**	% Volatile by Weight:	**N/A**
pH:	**~1 to 2**	Flash Point:	**Below room temperature (as hydrogen gas)**
LEL (Lower Explosive Limit)	**4% (Hydrogen)**	UEL (Upper Explosive Limit)	**74% (Hydrogen)**
Appearance and Odor:	**Manufactured article; no apparent odor. Electrolyte is a clear liquid with a sharp, penetrating, pungent odor.**		

10. STABILITY AND REACTIVITY
Stability: Stable _X_ Unstable ___
This product is stable under normal conditions at ambient temperature.

Conditions to Avoid: Prolonged overcharge at high current; sources of ignition.

Incompatibilities: (materials to avoid)
Electrolyte: Contact with combustibles and organic materials may cause fire and explosion. Also reacts violently with strong reducing agents, metals, sulfur trioxide gas, strong oxidizers, and water. Contact with metals may produce toxic sulfur dioxide fumes and may release flammable hydrogen gas.
Lead compounds: Avoid contact with strong acids, bases, halides, halogenates, potassium nitrate, permanganate, peroxides, nascent hydrogen, and reducing agents.

Hazardous Decomposition Products:
Electrolyte: Sulfur trioxide, carbon monoxide, sulfuric acid mist, sulfur dioxide, hydrogen sulfide.
Lead compounds: Temperatures above the melting point are likely to produce toxic metal fume, vapor, or dust; contact with strong acid or base or presence of nascent hydrogen may generate highly toxic arsine gas.

Hazardous Polymerization:
Will not occur

11. TOXICOLOGICAL INFORMATION

Routes of Entry:
Sulfuric Acid: Harmful by all routes of entry.
Lead Compounds: Hazardous exposure can occur only when product is heated, oxidized or otherwise processed or damaged to create dust, vapor or fume. The presence of nascent hydrogen may generate highly toxic arsine gas.

Inhalation:
Sulfuric Acid: Breathing of sulfuric acid vapors or mists may cause severe respiratory irritation.
Lead Compounds: Inhalation of lead dust or fumes may cause irritation of upper respiratory tract and lungs.

Ingestion:
Sulfuric Acid: May cause severe irritation of mouth, throat, esophagus and stomach.
Lead Compounds: Acute ingestion may cause abdominal pain, nausea, vomiting, diarrhea and severe cramping. This may lead rapidly to systemic toxicity and must be treated by a physician.

Skin Contact:
Sulfuric Acid: Severe irritation, burns and ulceration.
Lead Compounds: Not absorbed through the skin.

Eye Contact:
Sulfuric Acid: Severe irritation, burns, cornea damage, and blindness.
Lead Compounds: May cause eye irritation.

Effects of Overexposure - Acute:
Sulfuric Acid: Severe skin irritation, damage to cornea, upper respiratory irritation.
Lead Compounds: Symptoms of toxicity include headache, fatigue, abdominal pain, loss of appetite, muscular aches and weakness, sleep disturbances and irritability.

Effects of Overexposure - Chronic:
Sulfuric Acid: Possible erosion of tooth enamel, inflammation of nose, throat & bronchial tubes.

Lead Compounds: Anemia; neuropathy, particularly of the motor nerves, with wrist drop; kidney damage; reproductive changes in males and females. Repeated exposure to lead and lead compounds in the workplace may result in nervous system toxicity. Some toxicologists report abnormal nerve conduction velocities in persons with blood lead levels of 50 µg/100 ml or higher. Heavy lead exposure may result in central nervous system damage, encephalopathy and damage to the blood-forming (hematopoietic) tissues.

Carcinogenicity:
Sulfuric Acid: The International Agency for Research on Cancer (IARC) has classified "strong inorganic acid mist containing sulfuric acid" as a Category I carcinogen, a substance that is carcinogenic to humans. This classification does not apply to liquid forms of sulfuric acid or sulfuric acid solutions contained within a battery. Inorganic acid mist (sulfuric acid mist) is not generated under normal use of this product. Misuse of the product, such as overcharging, may result in the generation of sulfuric acid mist.

Lead Compounds: Lead is listed as a 2B carcinogen, likely in animals at extreme doses. Proof of carcinogenicity in humans is lacking at present.

Medical Conditions Generally Aggravated by Exposure:
Overexposure to sulfuric acid mist may cause lung damage and aggravate pulmonary conditions. Contact of sulfuric acid with skin may aggravate diseases such as eczema and contact dermatitis. Lead and its compounds can aggravate some forms of kidney, liver and neurologic diseases.

Acute Toxicity:
Inhalation LD50:
Electrolyte: LC50 rat: 375 mg/m3; LC50: guinea pig: 510 mg/m3
Elemental Lead: Acute Toxicity Point Estimate = 4500 ppmV (based on lead bullion)

Oral LD50:
Electrolyte: rat: 2140 mg/kg
Elemental lead: Acute Toxicity Estimate (ATE) = 500 mg/kg body weight (based on lead bullion)
Elemental Antimony: LD50 rat: 100 mg/kg

Additional Health Data:
All heavy metals, including the hazardous ingredients in this product, are taken into the body primarily by inhalation and ingestion. Most inhalation problems can be avoided by adequate precautions such as ventilation and respiratory protection covered in Section 8. Follow good personal hygiene to avoid inhalation and ingestion: wash hands, face, neck and arms thoroughly before eating, smoking or leaving the work site. Keep contaminated clothing out of non-contaminated areas, or wear cover clothing when in such areas. Restrict the use and presence of food, tobacco and cosmetics to non-contaminated areas. Work clothes and work equipment used in contaminated areas must remain in designated areas and never taken home or laundered with personal non-contaminated clothing. This product is intended for industrial use only and should be isolated from children and their environment.

The 19th Amendment to EC Directive 67/548/EEC classified lead compounds, but not lead in metal form, as possibly toxic to reproduction. Risk phrase 61: May cause harm to the unborn child, applies to lead compounds, especially soluble forms.

12. ECOLOGICAL INFORMATION

Environmental Fate: lead is very persistent in soil and sediments. No data on environmental degradation. Mobility of metallic lead between ecological compartments is slow. Bioaccumulation of lead occurs in aquatic and terrestrial animals and plants but little bioaccumulation occurs through the food chain. Most studies include lead compounds and not elemental lead.

Environmental Toxicity: Aquatic Toxicity:

Sulfuric acid:	24-hr LC50, freshwater fish (Brachydanio rerio): 82 mg/L
	96 hr- LOEC, freshwater fish (Cyprinus carpio): 22 mg/L
Lead:	48 hr LC50 (modeled for aquatic invertebrates): <1 mg/L, based on lead bullion

Additional Information

· No known effects on stratospheric ozone depletion.
· Volatile organic compounds: 0% (by Volume)
· Water Endangering Class (WGK): NA

13. DISPOSAL CONSIDERATIONS (UNITED STATES)

Spent batteries: Send to secondary lead smelter for recycling. Spent lead-acid batteries are not regulated as hazardous waste when the requirements of 40 CFR Section 266.80 are met. Spilled sulfuric acid is a characteristic hazardous waste; EPA hazardous waste number D002 (corrosivity) and D008 (lead).

Electrolyte: Place neutralized slurry into sealed acid resistant containers and dispose of as hazardous waste, as applicable. Large water diluted spills, after neutralization and testing, should be managed in accordance with approved local, state, and federal requirements. Consult state environmental agency and/or federal EPA.

Following local, State/Provincial, and Federal/National regulations applicable to end-of-life characteristics will be the responsibility of the end-user.

14. TRANSPORT INFORMATION

United States:

The U.S. Department of Transportation (DOT) hazardous materials regulations (49 CFR) applicable to lead acid batteries are specified in 49 CFR 173.159.

Proper Shipping Name:	Batteries, wet, filled with acid
Hazard Class:	8
ID Number:	UN2794
Packing Group:	N/A
Labels:	Corrosive

49 CFR 173.159(e) specifies that when transported by highway or rail, electric storage batteries containing electrolyte or corrosive battery fluid are not subject to any other requirements of this subchapter, if all of the following are met:

(1) No other hazardous materials may be transported in the same vehicle;

(2) The batteries must be loaded or braced so as to prevent damage and short circuits in transit;
(3) Any other material loaded in the same vehicle must be blocked, braced, or otherwise secured to prevent contact with or damage to the batteries; and
(4) The transport vehicle may not carry material shipped by any person other than the shipper of the batteries.

If any of the above-referenced requirements are not met, the batteries must be shipped as fully-regulated Class 8 Corrosive hazardous materials.

IATA Dangerous Goods Regulations (DGR):
The shipping information is as follows:

Proper Shipping Name:	Batteries, wet, filled with acid
Packing Group:	N/A
Hazardous Class:	8
Label/Placard Required:	Corrosive
UN Identification:	UN2794
Reference	IATA Packing Instruction 870 (IATA DGR 56th Edition)

IMDG Code:
The shipping information is as follows:
Proper Shipping Name: Batteries, wet, filled with acid
Packing Group: N/A
Hazardous Class: 8
Label/Placard Required: Corrosive
UN Identification: UN2794
Reference IMDG Code Packing Instruction P801

15. REGULATORY INFORMATION

UNITED STATES:

EPA SARA Title III:
Section 302 EPCRA Extremely Hazardous Substances (EHS):
Sulfuric acid is a listed "Extremely Hazardous Substance" under EPCRA, with a Threshold Planning Quantity (TPQ) of 1,000 lbs. EPCRA Section 302 notification is required if 500 lbs or more of sulfuric acid is present at one site (40 CFR 370.10). For more information consult 40 CFR Part 355.

Section 304 CERCLA Hazardous Substances:
Reportable Quantity (RQ) for spilled 100% sulfuric acid under CERCLA (Superfund) and EPCRA (Emergency Planning and Community Right to Know Act) is 1,000 lbs. State and local reportable quantities for spilled sulfuric acid may vary.

Section 311/312 Hazard Categorization:
EPCRA Section 312 Tier Two reporting is required for non-automotive batteries if sulfuric acid is present in quantities of 500 lbs or more and/or if lead is present in quantities of 10,000 lbs or more. For more information consult 40 CFR 370.10 and 40 CFR 370.40

Section 313 EPCRA Toxic Substances: 40 CFR section 372.38 (b) states: If a toxic chemical is present in an article at a covered facility, a person is not required to consider the quantity of the toxic chemical present in such article when determining whether an applicable threshold has been met under § 372.25, § 372.27, or § 372.28 or determining the amount of release to be reported under § 372.30. This exemption applies whether the person received the article from another person or the person produced the article. However, this exemption applies only to the quantity of the toxic chemical present in the article.

Supplier Notification: This product contains toxic chemicals that may be reportable under EPCRA Section 313 Toxic Chemical Release Inventory (Form R) requirements. For a manufacturing facility under SIC codes 20 through 39, the following information is provided to enable you to complete the required reports:

Toxic Chemical	CAS Number	Approximate % by Weight
Lead	7439-92-1	52%
Sulfuric Acid (as acid)	7664-93-9	12%
Antimony	7440-36-0	1.3%

See 40 CFR Part 370 for more details.

TSCA:

TSCA Section 8b – Inventory Status: All chemicals comprising this product are either exempt or listed on the TSCA Inventory.

TSCA Section 12b (40 CFR Part 707.60(b)) No notice of export will be required for articles, except PCB articles, unless the Agency so requires in the context of individual section 5, 6, or 7 actions.

TSCA Section 13 (40 CFR Part 707.20): No import certification required (EPA 305-B-99-001, June 1999, Introduction to the Chemical Import Requirements of the Toxic Substances Control Act, Section IV.A)

RCRA: Spent Lead Acid Batteries are subject to streamlined handling requirements when managed in compliance with 40 CFR section 266.80 or 40 CFR part 273. Waste sulfuric acid is a characteristic hazardous waste; EPA hazardous waste number D002 (corrosivity) and D008 (lead).

STATE REGULATIONS (US):

***Proposition 65 Warning**

Battery posts, terminals and related accessories contain lead and lead compounds, chemicals known to the state of California to cause cancer and reproductive harm. Wash hands after handling.

*Battery companies not party to the 1999 consent judgment with Mateel Environmental Justice Foundation should include a Proposition 65 Warning that complies with the current version of Proposition 65.

INTERNATIONAL REGULATIONS:

Distribution into Quebec to follow Canadian Controlled Product Regulations (CPR) 24(1) and 24(2).

Distribution into the EU to follow applicable Directives to the Use, Import/Export of the product as-sold.

16. OTHER INFORMATION

NFPA Hazard Rating for sulfuric acid:
Flammability (Red) = 0
Health (Blue) = 3
Reactivity (Yellow) = 2

Sulfuric acid is water-reactive if concentrated.

The information provided in this Safety Date Sheet is correct to the best of our knowledge, information and belief at the date of its publication. The information is given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal and release and it is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or any process, unless specified in the text.

CHEMICAL INVENTORY INFORMATION:

Mixture or Product Name: BATTERIES, WET, FILLED WITH ACID
CAS #:
Chemical Category: ☐ Pure ☑ Mixture
EHS: ☑ Yes ☐ No
Physical State: ☑ Solid ☑ Liquid ☐ Gas
☐ Identical to previous year
☐ Trade secret

PHYSICAL HAZARDS:
- ☑ Explosive
- ☑ Flammable (gases, aerosols, liquids, or solids)
- ☐ Oxidizer (liquid, solid, or gas)
- ☐ Self-reactive
- ☐ Pyrophoric (liquid or solid)
- ☐ Pyrophoric gas
- ☐ Self-heating
- ☐ Organic peroxide
- ☐ Corrosive to metal
- ☐ Gas under pressure (compressed gas)
- ☐ In contact with water emits flammable gas
- ☐ Combustible dust

HEALTH HAZARDS:
- ☑ Acute toxicity (any route of exposure)
- ☑ Skin corrosion or irritation
- ☑ Serious eye damage or eye irritation
- ☐ Respiratory or skin sensitization
- ☐ Germ cell mutagenicity
- ☑ Carcinogenicity
- ☑ Reproductive toxicity
- ☑ Specific target organ toxicity (single or repeated exposure)
- ☐ Aspiration hazard
- ☐ Simple asphyxiant

☐ Hazard not otherwise classified

AMOUNTS:
☐ Below Reporting Thresholds
Maximum Amount: 11,755 pounds Maximum Amount code: 06 (10,000-24,999 pounds)
Average Daily Amount: 8,094 pounds Average Daily Amount code: 05 (5,000-9,999 pounds)
Max amount in largest container: 3,402 pounds

Facility: Closed Loop Refining & Recovery (continued)

>>>>>>>>>> THIS FACILITY HAS NOT PASSED A VALIDATION CHECK <<<<<<<<<<

Average Daily Amount: 8,094 pounds Average Daily Amount code: 05 (5,000-9,999 pounds)
Max amount in largest container: 3,402 pounds
Days on site: 252

STORAGE LOCATIONS:
☐ Confidential

Location Description: Batteries at charging station (west side of building, north of office area) and in tow motors throughout the building
Container Type: Battery Pressure: Ambient pressure Temperature: Ambient temperature
Amount: 11,755 pounds

MIXTURE COMPONENTS:

Name: sulfuric acid CAS #: 7664-93-9 ☑ EHS
Max Amt Code: 04 (1,000-4,999 pounds) Component Percentage: 12 (by weight)

STATE-SPECIFIC CHEMICAL DATA FIELDS FOR OHIO:
Fee classification for this reported substance: Extremely Hazardous Substance (EHS)

State/local fees: $300.00

☑ I have attached a site plan
☐ I have attached a list of site coordinate abbreviations
☐ I have attached a description of dikes and other safeguard measures

FACILITY NOTES:
It is anticipated that batteries will be removed from the site by August 2022.

Certification (Read and sign after completing all sections)

I certify under penalty of law that I have personally examined and am familiar with the information in pages 1 through 3, and that based on my inquiry of those individuals responsible for obtaining this information, I believe that the submitted informaton is true, accurate, and complete.

Ohio | State Emergency Response Commission

Facility Annual Chemical Filing Fee Worksheet

Complete this worksheet to determine the required filing fee amount. Detach the bottom portion at the perforation and include the stub, along with a check in your envelope. Please make check payable to the "Treasurer State of Ohio" and include the Revenue ID number on check. The top portion may be kept for your records.

DO NOT put anything besides the stub and check payment in the envelope.

CLOSED LOOP REFINING & RECOVERY	Revenue ID: 1464566
1655 and 1675 WATKINS ROAD	Check Date: February 18, 2022
COLUMBUS, Ohio 43207	Check #: 146
FRANKLIN	Check Amount: $ 300.00

Please answer the following questions:

1) Reporting facility has reported # 1 extremely hazardous substance(s); pure or mixture component.
2) Facility has reported # 0 hazardous chemical(s); as defined under OSHA 1910.1200 and having a safety data sheet. Do not count extremely hazardous substance(s) reported in #1 above.

A. Base inventory filing fee, reporting one or more hazardous chemicals under the Emergency Planning and Community Right-to-Know Act.	$ 150.00	(A)
B. Number of extremely hazardous substance(s) given in #1 above, multiplied by $150.00	$ 150.00	(B)
C. Number of hazardous substance(s) as identified in #2 above, multiplied by $20.00	$ 0.00	(C)
Total (A + B + C)	$ 300.00	(D)
E. Credit. If you paid a right-to-know fee to a city as the result of a grandfathered local law, enter the amount paid to that local for the same reporting period on line E. Please email local fee documentation to SERC@epa.ohio.gov and reference the company name and Revenue ID#. If no fee was paid enter zero (0) on line E. If your local fee is greater than the amount on line D, enter zero (0) on line G.	$ 0.00	(E)
F. If your payment is postmarked after March 31, a 10% late filing fee is assessed.	$ 0.00	(F)
Total annual inventory filing fee due **Total (D - E + F)**	**$ 300.00**	**(G)**

*Facility fee cap, not to exceed $2,500.00

REMOVE THIS STUB. Please only mail stub with check. Do not mail top portion.

PROJECT TEAM

OWNER: Garrison Southfield Park LLC

LEGAL COUNSEL: King and Spalding LLP

Closure Plan Consultant: EnSafe Inc.

Removal Action Contractor: NovoTec Recycling

Building Lead Abatement Contractor: HEPA Environmental Services

Reference Documents:

Action Memorandum, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

Hazardous Waste Contingency Plan, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec continued cleaning and wrapping the boxes in Buildings 1655 and 1675.
b) NovoTec continued shipping materials to CompuPoint (Recycling) and Max Environmental (Treatment/Disposal). A dump trailer was used to ship one load of crushed glass gaylord boxes to Max Environmental. Refer to Section 4.0 for summary of material shipments.
c) The carpet and the mastic in the 1675 Office Area has been removed by HEPA, a certified and licensed asbestos abatement contractor.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) On 11/20/20, the HVAC contractor repaired one of the gas heaters in 1655 since it stopped working. Additionally, the rollup garage door in 1675 was repaired on 11/20/20. Both these activities were completed when no removal action was performed in the buildings.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) HEPA has stored the generated wastes (Decontamination water) in the Hazardous Waste Storage containment in the southwest corner of Building 1655. Waste characterization samples (water and sediment) collected by HEPA indicates that the decontamination water can be classified as non-hazardous waste. Max has indicated that they can accept this water for disposal at their facility. They have requested a representative sample for treatability studies at their facility. This sample was collected on 11/16/20 and sent to Max.
b) Summary of shipments during the reporting period and totals to date:

Totals this reporting period:
31 Loads to Max (Approx. 1.27 million pounds gross)
6 Loads to CompuPoint (Approx. 116K pounds net)
Totals to date:
148 Loads to Max (Approx. 6.28 million pounds gross)
40 Loads to CompuPoint (Approx. 849K pounds net)

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec continued cleaning and wrapping the boxes in Buildings 1655 and 1675.
b) NovoTec continued shipping materials to CompuPoint (Recycling) and Max Environmental (Treatment/Disposal). Refer to Section 4.0 for summary of material shipments.
c) HEPA completed site preparation (sealing the power outlets and power panels; filling cracks larger than 1/8-inch on the floor; and covering garage doors with polythene sheeting) for Area 1. They have started pressure washing and expect to be done next early next week. The interior sides of Area 1 have been draped with polythene sheeting from ceiling to prevent dust from migrating in to the cleaned area.
d) NovoTec and HEPA worked three days this week due to the holidays.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) NovoTec employees are scheduled to complete the follow-up blood test (2 months after start date) next week.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) HEPA has stored the generated wastes (Decontamination water) in the Hazardous Waste Storage containment in the southwest corner of Building 1655. Waste characterization samples (water and sediment) collected by HEPA indicates that the decontamination water can be classified as non-hazardous waste. Max has indicated that they can accept this water for disposal at their facility.

They have requested a representative sample for treatability studies at their facility. This sample was collected on 11/16/20 and sent to Max.

b) Summary of shipments during the reporting period and totals to date:

Totals this reporting period:

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec continued cleaning and wrapping the boxes in Buildings 1655 and 1675.
b) NovoTec continued shipping materials to CompuPoint (Recycling) and Max Environmental (Treatment/Disposal). Refer to Section 4.0 for summary of material shipments.
c) HEPA completed site preparation (sealing the power outlets and power panels; filling cracks larger than 1/8-inch on the floor; and covering garage doors with polythene sheeting) and building decontamination (lead abatement by HEPA vacuuming dry walls and pressure washing ceilings, structural members, and floors) for Area 1. The interior sides of Area 1 have been draped with polythene sheeting from ceiling to prevent dust from migrating into the cleaned area. HEPA started site preparation of Area 2 and expect to complete the building decontamination of Area 2 next week.
d) A virtual walk through was performed by Ohio EPA on 12/01/20.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) NovoTec employees working in the Exclusion Zone have completed the follow-up blood test (2 months after start date).

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) HEPA has stored the generated wastes (Decontamination water) in the Hazardous Waste Storage containment in the southwest corner of Building 1655. Waste characterization samples (water and sediment) collected by HEPA indicates that the decontamination water can be classified as non-hazardous waste. Max has indicated that they can accept this water for disposal at their facility. However, the cost for disposal was higher than expected. Therefore, we are looking at the option of disposal at a local TSDF at a lower cost.

b) Summary of shipments during the reporting period and totals to date:

Totals this reporting period:

20 Loads to Max (Approx. 826.6K pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655 & 1675)

6 Loads to CompuPoint (Approx. 136.8K pounds net from 1655)

Totals to date:

186 Loads to Max (Approx. 7.88 million pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655 & 1675). Of the 7.88 million pounds of materials shipped to Max, 5.7 million pounds of CRTs were from 1655; 20.8K pounds of plastic materials were from 1655; 477.7K pounds of CRTs were from 1675; and 1.65 million pounds of mixed glass were from 1675)

49 Loads to CompuPoint (Approx. 1.049 million pounds net from 1655)

a) NovoTec continued cleaning and wrapping the boxes in Buildings 1655 and 1675.
b) NovoTec continued shipping materials to CompuPoint (Recycling) and Max Environmental (Treatment/Disposal). Refer to Section 4.0 for summary of material shipments.
c) HEPA completed site preparation (sealing the power outlets and power panels; filling cracks larger than 1/8-inch on the floor; and covering garage doors with polythene sheeting) and building decontamination (lead abatement by HEPA vacuuming dry walls and pressure washing ceilings, structural members, and floors) for Area 2. The interior sides of Areas 1 & 2 have been draped with polythene sheeting from ceiling to prevent dust from migrating into the cleaned areas. HEPA started site preparation of Area 3 and expect to complete the building decontamination of Area 3 next week.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) Due to a reduction in volumes of materials in 1655, the removal action will continue with removal of materials from 1675 up to the available budget in the escrow. To move the materials out of 1675 more efficiently and to facilitate completion of lead abatement of 1655, it has been decided to build the CRZ/CLZ in 1675 and remove the CRZ/CLZ in 1655 by the end of December.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) HEPA has stored the generated wastes (Decontamination water) in the Hazardous Waste Storage containment in the southwest corner of Building 1655. Waste characterization samples (water and sediment) collected by HEPA indicates that the decontamination water can be classified as non-hazardous waste. Max has indicated that they can accept this water for disposal at their facility. However, the cost for disposal was higher than expected. Therefore, we are looking at the option of disposal at a local TSDF at a lower cost.

b) Summary of shipments during the reporting period and totals to date:

Totals this reporting period:

21 Loads to Max (Approx. 912K pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655 & 1675)

8 Loads to CompuPoint (Approx. 169.5K pounds net from 1655)

Totals to date:

207 Loads to Max (Approx. 8.8 million pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655 & 1675). Of the 7.88 million pounds of materials shipped to Max, 5.7 million pounds of CRTs were from 1655; 24.1K pounds of plastic materials were from 1655; 521K pounds of CRTs were from 1675; and 2.52 million pounds of mixed glass were from 1675)

57 Loads to CompuPoint (Approx. 1.218 million pounds net from 1655)

The interior sides of Areas 1 & 2 have been draped with polythene sheeting from ceiling to prevent dust from migrating into the cleaned areas. HEPA continued decontamination of Area 3 and expect to complete Area 3 next week.
d) HEPA started construction of the CRZ/CLZ in 1675. Floor cracks larger than 1/8-inch are being filled; power outlets and wall openings are being covered; and walls and ceilings are being cleaned.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) HEPA continues to store the generated wastes (Decontamination water) in the Waste Storage containment in the southwest corner of Building 1655. Waste characterization samples (water and sediment) collected by HEPA indicates that the decontamination water can be classified as non-hazardous waste. Additional sampling will also be performed prior to disposal. HEPA will ship the decontamination water towards the end of the project using vac truck for offsite treatment and disposal.

b) Summary of shipments during the reporting period and totals to date:

Totals this reporting period:

- ✓ 27 Loads to Max (Approx. 1.159 million pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655 & 1675)
- ✓ 10 Loads to CompuPoint (Approx. 264.6K pounds net from 1655)

Totals to date:

- ✓ 234 Loads to Max (Approx. 9.95 million pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655 & 1675). Of the 9.95 million pounds of materials shipped to Max, 5.7 million pounds of CRTs were from 1655; 24.1K pounds of plastic materials were from 1655; 521K pounds of CRTs were from 1675; and 3.68 million pounds of mixed glass were from 1675)
- ✓ 67 Loads to CompuPoint (Approx. 1.483 million pounds net from 1655; including whole units and projection lens)

Hazardous Waste Contingency Plan, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec did not work onsite this week as the first week of a two-week holiday shutdown.
b) HEPA worked three days due to the holiday weekend.
c) HEPA completed site preparation (sealing the power outlets and power panels; filling cracks larger than 1/8-inch on the floor; and covering garage doors with polythene sheeting) and building decontamination (lead abatement by HEPA vacuuming dry walls and pressure washing ceilings, structural members, and floors) for Areas 1, 2, 3, and 4. The interior sides of Areas 1, 2 & 3 have been draped with polyethylene sheeting from ceiling to prevent dust from migrating into the cleaned areas. HEPA continued decontamination of Area 5 and expects to complete Area 5 by January 14.
d) HEPA completed construction of the CRZ/CLZ in 1675. The air blowers will be connected next week after the electrical work is completed.
e) The gas line running from 1675 to a heater in the Breezeway was capped in 1675.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) Tools and equipment worth about $5000 were stolen from the warehouse during the holiday break between 12/24 and 12/28. A Police Report was filed by HEPA. The perimeter was secured and EnSafe began researching the need for additional security measures. Additional tools and equipment worth about $1500 were stolen during the holiday break between 12/31 and 1/3. A second Police Report was filed by EnSafe. EnSafe was advised that the police will not investigate either incident given COVID-19 protocols. There were other reports of burglaries in the immediate area. In response to these incidents and the police's COVID-19 policy, EnSafe has instituted these additional security measures – (1) the locks have been changed by JLL; (2) installing a security

camera this week; (3) retaining security guards or patrols; and (4) installing warning signs/decals around the property.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) HEPA continues to store the generated wastes (Decontamination water) in the Waste Storage containment in the southwest corner of Building 1655. Waste characterization samples (water and sediment) collected by HEPA indicates that the decontamination water can be classified as non-hazardous waste. Additional sampling will also be performed prior to disposal. HEPA will ship the decontamination water towards the end of the project using vac truck for offsite treatment and disposal.

b) Summary of shipments during the reporting period and totals to date:

Totals this reporting period:

No materials were shipped offsite during this period.

Totals to date:

- ✓ 255 Loads to Max (Approx. 10.860 million pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655 & 1675). Of the 10.860 million pounds of materials shipped to Max, 5.7 million pounds of CRTs were from 1655; 24.1K pounds of plastic materials were from 1655; 521K pounds of CRTs were from 1675; and 4.58 million pounds of mixed glass were from 1675)
- ✓ 73 Loads to CompuPoint (Approx. 1.626 million pounds net from 1655; including whole units and projection lens. Also, this includes one load of unprocessed CRT Tubes to see if CompuPoint can recycle these materials)

LEGAL COUNSEL: King and Spalding LLP

Closure Plan Consultant: EnSafe Inc.

Removal Action Contractor: NovoTec Recycling

Building Lead Abatement Contractor: HEPA Environmental Services

Reference Documents:

Action Memorandum, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

Hazardous Waste Contingency Plan, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec did not work onsite this week as the second week of a two-week holiday shutdown.
b) HEPA continued decontamination of Area 5 and expects to complete Area 5 by January 14.
c) HEPA started deconstructing the CRZ/CLZ in 1655.
d) Electrical work was completed in 1675 for the CRZ/CLZ and the air blowers were tested. Six blowers are in the CRZ and four are in the CLZ.
e) The electrical line from 1655 powering the exit sign in the breezeway was capped; the exit sign is now powered from 1675.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) HEPA continues to store the generated wastes (Decontamination water) in the Waste Storage containment in the southwest corner of Building 1655. Waste characterization samples (water and sediment) collected by HEPA indicates that the decontamination water can be classified as non-hazardous waste. Additional sampling has been performed and the results confirm that the decontamination waster can be classified as non-hazardous waste. HEPA has scheduled the disposal of decontamination water next week.
b) Summary of shipments during the reporting period and totals to date:

Totals this reporting period:

No materials were shipped offsite during this period.

Totals to date:

- ✓ 255 Loads to Max (Approx. 10.860 million pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655 & 1675). Of the 10.860 million pounds of materials shipped to Max, 5.7 million pounds of CRTs were from 1655; 24.1K pounds of plastic materials were from 1655; 521K pounds of CRTs were from 1675; and 4.58 million pounds of mixed glass were from 1675)
- ✓ 73 Loads to CompuPoint (Approx. 1.626 million pounds net from 1655; including whole units and projection lens. Also, this includes one load of unprocessed CRT Tubes to see if CompuPoint can recycle these materials)

CLOSED LOOP REFINING & RECOVERY

Hazardous Waste Contingency Plan, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec started shipping materials to CompuPoint (Recycling) and Max Environmental (Treatment/Disposal) through the CRZ/CLZ in 1675. Refer to Section 4.0 for summary of material shipments.
b) The last two loads of whole units from 1655 were shipped to CompuPoint. All materials from 1655 have been shipped offsite.
c) HEPA shipped the decontamination water offsite for disposal. Refer to Section 4.0 for summary of decontamination water shipments.
d) HEPA completed the wall construction in the breezeway between 1675 and 1655.
e) HEPA completed decontamination of Area 5, which concluded the decontamination of 1655. A walkthrough was completed by EnSafe and HEPA to ensure all remaining equipment and supplies/materials have been removed from 1655 prior to HEPA demobilizing from the warehouse.
f) A virtual walk through was performed by Ohio EPA on 1/12/21.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) HEPA shipped two loads of decontamination water from 1655 totaling approximately 9,300 gallons. The water was confirmed non-hazardous and sent to PennOhio Corporation for treatment and disposal. The totes/drums were rinsed and staged in 1675 for future use.

b) Summary of shipments during the reporting period and totals to date:

Totals this reporting period:

- ✓ 00 loads from 1655 to Max
- ✓ 30 Loads from 1675 to Max (Approx. 1.276 million pounds of CRTs, crushed glass and other related CRT wastes from 1675)
- ✓ 2 Loads from 1655 to CompuPoint (Approx. 45K pounds from 1655)
- ✓ 6 Loads from 1675 to CompuPoint (Approx. 147k from 1675)

Totals to date:

- ✓ 139 Loads from 1655 to Max (Approx. 5.751 million pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1655; including 189K pounds from 1675 and 24,132 pounds of plastic from 1655).
- ✓ 150 Loads from 1675 to Max (Approx. 6,240 million pounds of CRTs, crushed glass, plastic and other related CRT wastes from 1675).
- ✓ 75 Loads from 1655 to CompuPoint (Approx. 1.672 million pounds; including whole units, projection lenses, and unprocessed CRT)
- ✓ 6 Loads from 1675 to CompuPoint (Approx. 147K pounds; including whole units, projection lenses, and plastic)

b) NovoTec continued to fill the processed gaylord boxes in the CRZ/CLZ for shipment to Max Environmental (Treatment/Disposal).

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) Ohio EPA has indicated that all gaylord boxes need to have "Hazardous Waste Label" prior to shipment to Max Environmental. NovoTec had been placing the DOT UN3077 Hazard Class 9 labels on the individual boxes when shipments are made via Box Trailers; however, it was not required for Dump Trucks per Max Environmental since Dump Trucks are considered "unit load devices" per § 172.400a which lists exceptions from labeling that states - "An overpack or unit load device in or on which labels representative of each hazardous material in the overpack or unit load device are visible". Both the Box Trailers and Dump Trucks have DOT placards on all four sides prior to leaving the site. Since gaylord boxes are processed inside the warehouse and moved to the Clean Loading Zone (CLZ) awaiting shipment to Max Environmental, DOT UN3077 Hazard Class 9 labels are required on the individual gaylord boxes (even when shipped via Dump Trucks). This issue has been resolved since NovoTec has started placed those labels on the gaylord boxes when placed in the CLZ.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

WEEKLY STATUS UPDATE: 10/18/21 – 10/24/21

PROJECT TEAM	
OWNER: Garrison Southfield Park LLC	**LEGAL COUNSEL:** King and Spalding LLP
Closure Plan Consultant: EnSafe Inc.	**Removal Action Contractor:** NovoTec Recycling
Building Lead Abatement Contractor: HEPA Environmental Services	

Reference Documents:

Action Memorandum, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

Hazardous Waste Contingency Plan, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec continued cleaning and wrapping the gaylord boxes in 1675.
b) NovoTec continued to fill the processed gaylord boxes in the CRZ/CLZ for shipment to Max Environmental (Treatment/Disposal).
c) NovoTec repaired the Leveler on Dock#9.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) Columbus Fire Department visited the site and has indicated there were no issues related to the cleanup operations.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

- ✓ 60 Loads from 1675 to Max (Approx. 2,580,615 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 0 Loads from 1675 to CompuPoint (Approx. 0 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic)

Totals to date (Phase 2 – Since September 2021):

- ✓ 340 Loads from 1675 to Max (Approx. 14,669,577 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 0 Loads from 1675 to CompuPoint (Approx. 0 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic)

c) HEPA-ES continued lead abatement and building decontamination activities.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) EnSafe discussed labelling protocol with Ohio EPA on November 15, 2021 for gaylord boxes shipped to Max Environmental. NovoTec will continue to place the labels (NA 3077) on individual gaylord boxes transported by box trailers. Additionally, the box trailers will have placards (NA 3077) on all four sides prior to shipment. Materials shipped via dump trucks will not have the labels on the individual gaylord boxes; however, the dump trucks will have placards (NA 3077) on all four sides prior to shipment. NovoTec will continue to monitor the condition of boxes in the Clean Loading Zone (CLZ) prior to shipment; particularly when boxes are staged in the CLZ over the weekend. NovoTec will not place any boxes in the CLZ during long weekend breaks and extended holidays.
b) Columbus Fire Department (Lt. Dye) visited the site for a routine inspection. No issues were identified; they were doing a quick follow-up on the removal action.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

- ✓ 62 Loads from 1675 to Max (Approx. 2,680,441 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) An electrician had inspected the non-functioning transformer on Monday 12/27/21 and determined that too much load is being put through the transformer by the air filtration devices, pressure washers, and vacuum cleaners operated by HEPA-ES and will need to be replaced. In the interim, while EnSafe evaluates options to replace the transformer, HEPA-ES brought in a mobile generator to operate this equipment.

c) HEPA-ES continued lead abatement and building decontamination activities.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) The non-functioning transformer has been replaced by HEPA-ES on Friday 1/7/22 and all panels are functional now.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

- ✓ 53 Loads from 1675 to Max (Approx. 2,271,033 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 4 Loads from 1675 to CompuPoint (Approx. 125,155 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic).

Totals to date (Phase 2 – Since September 2021):

- ✓ 866 Loads from 1675 to Max (Approx. 37,375,399 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 28 Loads from 1675 to CompuPoint (Approx. 817,365 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic).

CLOSED LOOP REFINING & RECOVERY
1655 and 1675 Watkins Road
Columbus, Ohio 43207
EPA ID NO. OHR000167718
EnSafe Project No. 0888827831

WEEKLY STATUS UPDATE: 01/10/22 – 01/16/22

PROJECT TEAM	
OWNER: Garrison Southfield Park LLC	**LEGAL COUNSEL:** King and Spalding LLP
Closure Plan Consultant: EnSafe Inc.	**Removal Action Contractor:** NovoTec Recycling
Building Lead Abatement Contractor: HEPA Environmental Services (HEPA-ES)	

Reference Documents:

Action Memorandum, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

Hazardous Waste Contingency Plan, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec continued cleaning and wrapping the gaylord boxes in 1675.
b) NovoTec continued to fill the processed gaylord boxes in the CRZ/CLZ for shipment to Max Environmental (Treatment/Disposal) and to CompuPoint (Recycling).
c) HEPA-ES continued lead abatement and building decontamination activities.
d) HEPA-ES has shipped the first batch of decontamination water (approximately 4,800 gallons) to PennOhio Corporation as non-hazardous waste based on waste characterization data.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) A trench floor drain (approximately 6 inches deep by 6 inches wide by 50-60 feet long) was identified in the north end of the building. An approximately 3-inch diameter pipe at the north end of the trench appears to be blocked (possibly with concrete) approximately one foot north of the exterior wall based on video inspection of the pipe. The trench floor drain was visually inspected, and no cracks or joints were observed. An inflatable bladder will be used to seal the pipe while washing the warehouse in that area. Additional efforts are underway to further investigate the pipe. Ohio EPA has been notified.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

- ✓ 51 Loads from 1675 to Max (Approx. 2,194,591 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 3 Loads from 1675 to CompuPoint (Approx. 95,307 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic).

Totals to date (Phase 2 – Since September 2021):

- ✓ 917 Loads from 1675 to Max (Approx. 39,569,990 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 31 Loads from 1675 to CompuPoint (Approx. 913,512 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic).

b) NovoTec continued to fill the processed gaylord boxes in the CRZ/CLZ for shipment to Max Environmental (Treatment/Disposal) and to CompuPoint (Recycling).
c) HEPA-ES continued lead abatement and building decontamination activities.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) The heaters throughout the warehouse are not functional; JLL (the building maintenance contractor) determined that there is natural gas flowing to each of the heaters and was able to turn on one of the heaters. However, the other seven heaters do not have power. The JLL maintenance contractor is working to identify the problem. JLL had the sprinkler system turned off as a precaution so the pipelines do not burst due to the cold weather; the system will be turned on once the heaters are working.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

- ✓ 50 Loads from 1675 to Max (Approx. 2,151,353 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 5 Loads from 1675 to CompuPoint (Approx. 148,465 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic).

Totals to date (Phase 2 – Since September 2021):

- ✓ 1007 Loads from 1675 to Max (Approx. 43,440,785 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 39 Loads from 1675 to CompuPoint (Approx. 1,147,297 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic).

c) HEPA-ES continued lead abatement and building decontamination activities.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) A JLL electrical contractor completed repairs to the electric to bring power to each of the heaters that are not functional. A JLL HVAC contractor is scheduled to be onsite on February 7, 2022 to complete other repairs and turn the heaters on. The fire suppression system will be turned on once the heaters are working.
b) Max Environmental cancelled all scheduled trucks Monday through Wednesday due to an equipment failure at Max Environmental. The scheduled trucks for Thursday and Friday were also cancelled due to inclement weather.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec continued cleaning and wrapping the gaylord boxes in 1675.
b) NovoTec continued to fill the processed gaylord boxes in the CRZ/CLZ for shipment to Max Environmental (Treatment/Disposal).
c) HEPA-ES completed the demolition of the drywall partition surrounding the Crusher Room. The removed drywall has been placed in roll-offs for shipment as non-hazardous waste based on the sampling performed by HEPA-ES. The removed metal framing from the drywall has been sent to Ace Iron & Metal Company for recycling.
d) HEPA-ES continued lead abatement and building decontamination activities.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) JLL HVAC contractor was able to repair two of the heaters; however, the remaining heaters will require some additional parts before they can be turned on. JLL will inform us when they will reschedule the HVAC contractor.
b) Since the temperature inside the warehouse is above freezing condition and the weather is expected to be warm in the coming days, the fire suppression system has been turned on while the heaters are being repaired.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec continued cleaning and wrapping the gaylord boxes in 1675.
b) NovoTec continued to fill the processed gaylord boxes in the CRZ/CLZ for shipment to Max Environmental (Treatment/Disposal).
c) NovoTec continued dismantling the Crusher Unit.
d) HEPA-ES continued lead abatement and building decontamination activities.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) A non-functional passenger elevator (pit-less hydraulic system) was noticed in the southwest corner of the warehouse behind a boarded wall. The inspection log indicates that the last inspection was done in 2002 and it appears that the elevator has been disconnected and the wall opening inside the warehouse had been boarded up with plywood. There are seven 1-liter cans of unused hydraulic oil in the elevator control room. Based on historical aerial photographs, it appears that the elevator must have been installed between 1983 and 1994. Since the elevator had been rendered non-operational and boarded up prior to Closed Loop operations, it is expected that the past operation of the elevator may not impact the current Closure Plan for the warehouse related to Closed Loop operations. However, EnSafe is reviewing registration, operation, and closure documentation with the Ohio Department of Commerce for this elevator to ensure the elevator is properly documented for removal from active service.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

- ✓ 50 Loads from 1675 to Max (Approx. 2,154,650 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ No shipments to CompuPoint this week.

Totals to date (Phase 2 – Since September 2021):

- ✓ 1346 Loads from 1675 to Max (Approx. 58,055,154 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 56 Loads from 1675 to CompuPoint (Approx. 1,593,177 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic).

Building Lead Abatement Contractor: HEPA Environmental Services (HEPA-ES)	

Reference Documents:

Action Memorandum, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

Hazardous Waste Contingency Plan, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) NovoTec continued cleaning and wrapping the gaylord boxes in 1675.
b) NovoTec continued to fill the processed gaylord boxes in the CRZ/CLZ for shipment to Max Environmental (Treatment/Disposal).
c) NovoTec completed shipment of crushed glass to Max Environmental.
d) NovoTec completed dismantling the Crusher Unit.
e) HEPA-ES continued lead abatement and building decontamination activities.
f) The awning contractor completed removal of the awning structure since we have completed shipments of crushed glass using dump trucks. All future shipments will be using box trailers.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) JLL is trying to find a qualified elevator professional to open the elevator for inspection.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

4.0 WASTE MANAGEMENT AND OFF-SITE SHIPMENT

a) Summary of shipments during the reporting period and totals to date for Phase 2 (1675 Watkins since September 2021 Mobilization):

Totals this reporting period:

- ✓ 22 Loads from 1675 to Max (Approx. 950,120 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ No shipments to CompuPoint this week.

Totals to date (Phase 2 – Since September 2021):

- ✓ 1,368 Loads from 1675 to Max (Approx. 59,005,274 pounds of Mixed Glass/Crushed Glass and other related CRT wastes).
- ✓ 56 Loads from 1675 to CompuPoint (Approx. 1,593,177 pounds; including whole units, projection lenses, unprocessed CRT Tubes, and plastic).

d) HEPA-ES was not onsite this week.
e) No field work on Monday May 30, 2022 due to Memorial Day Holiday.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) The flap door on the CLZ (Warehouse Side) was damaged by NovoTec during loading; however, the structure appears to be sound, and the Air Filtration Devices are functioning properly. HEPA-ES repaired the damage and NovoTec continued the loading operations.
b) The electrical contractor (Riverside Electric) disconnected the remaining exhaust fans located on the eastside of the warehouse so HEPA-ES can clean the fans.
c) VFP, the sprinkler system contractor, completed the repairs related to the two riser pipes and turned on the system.
d) Kone Elevator Company has indicated that no additional closure notification related to the non-functional elevator is required since it was never registered, and the system has been sealed and closed.

3.0 REGULATORY COMPLIANCE UPDATES

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) HEPA-ES continued building decontamination.
b) HEPA-ES packaged the gaylord boxes (containing floor sweeping debris, spent PPE, and plastic sheeting) for shipment to Max Environmental as hazardous waste.
c) HEPA-ES is removing the polythene sheeting off the lights, heaters, and electrical outlets and cleaning them.
d) HEPA-ES is cleaning the floor for the final time with a floor scrubber.
e) Ohio EPA visited the site on July 20 and had indicated work is being conducted per the Closure Plan.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) There was a leak in one of the fire sprinkler system pipelines and VFP Services repaired the leak. No further action is needed.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) HEPA-ES completed demobilization of equipment and supplies from the site.
b) Columbus Fire Department performed an inspection and mentioned that they had no comments on the closure activities. However, they indicated that fire alarms will need to be reconnected, fire doors repaired, and fire extinguishers placed at appropriate locations before the building can be certified for legal occupancy.
c) Ohio EPA visited the site on 8/11/22 and mentioned about further discussion needed on the riser pipe pits.

2.0 MATTERS RESOLVED THIS PERIOD OR YET TO BE RESOLVED

a) None to report this period.

3.0 REGULATORY COMPLIANCE UPDATES

a) None to report this period.

Hazardous Waste Contingency Plan, Closed Loop Refining & Recovery, 1655 And 1675 Watkins Road, Columbus, Ohio 43207 (September 2020). Prepared by EnSafe Inc.

1.0 SUMMARY OF ACTIVITIES ACCOMPLISHED THIS PERIOD

a) Ohio EPA and Ohio AG office visited the site on 8/18/22 to perform a final inspection of the warehouse.
b) As discussed with Ohio EPA, HEPA-ES collected two samples (one from each of the pits associated with riser pipes #8 and #9) on 8/19/22 and sent to the laboratory for total lead analysis. Each of these samples were a composite from two locations within the pit just below the gravel (approximately 18 inches). An additional aliquot was also collected from each location for TCLP lead analysis at a later date depending on the review of the total lead results.
