CERTIFICATION STATEMENT

The attached closure report presents the results of closure activities performed at 1675 Watkins Road in Columbus, Ohio, pursuant to the September 2020 Closure Plan and Engineering Evaluation/ Cost Analysis (Action Memorandum), which is available for public review at http://edocpub.epa.ohio.gov/publicportal/ViewDocument.aspx?docid=1434634.
On September 3, 2020, the Ohio Environmental Protection Agency issued a determination that the Closure Plan addressed the administrative requirements of Ohio Administrative Code Chapters 3745-65 and 3745-66 and the substantive requirements of Ohio Administrative Code Chapters 3745-54 and 3745-55, and that it was consistent with 40 Code of Federal Regulations Part 300 of the United States Environmental Protection Agency National Contingency Plan.

"I CERTIFY UNDER PENALTY OF LAW THAT THIS DOCUMENT AND ALL ATTACHMENTS WERE PREPARED UNDER MY DIRECTION OR SUPERVISION IN ACCORDANCE WITH A SYSTEM DESIGNED TO ASSURE THAT QUALIFIED PERSONNEL PROPERLY GATHER AND EVALUATE THE INFORMATION SUBMITTED. BASED ON MY INQUIRY OF THE PERSON OR PERSONS WHO MANAGE THE SYSTEM, OR THOSE PERSONS DIRECTLY RESPONSIBLE FOR GATHERING THE INFORMATION, THE INFORMATION SUBMITTED IS, TO THE BEST OF MY KNOWLEDGE AND BELIEF, TRUE, ACCURATE, AND COMPLETE. I AM AWARE THAT THERE ARE SIGNIFICANT PENALTIES FOR SUBMITTING FALSE INFORMATION, INCLUDING THE POSSIBILITY OF FINE AND IMPRISONMENT FOR KNOWING VIOLATIONS."

Appendix F EnSafe Weekly Update Reports — Phase 1 and Phase 2

1.0 INTRODUCTION

This Closure Report was prepared to document completion of closure activities related to the former Closed Loop Refining & Recovery (Closed Loop) facility at 1675 Watkins Road in Columbus, Ohio (1675 Watkins Road). These activities were performed in accordance with the Closure Plan, which was prepared to demonstrate compliance with the administrative requirements of Ohio Administrative Code (OAC) Chapters 3745-65 and 3745-66; the substantive requirements of OAC Chapters 3745-54 and 3745-55, including but not limited to, the groundwater protection program in accordance with OAC rules 3745-54-90 through 54-100; and Title 40 of the Code of Federal Regulations, Part 264, Subpart G.[1]

The Closure Plan was prepared to address closure of two separate and adjacent warehouses at 1655 and 1675 Watkins Road. As noted in Section 7.3 of the Closure Plan, closure of each warehouse would be performed separately with separate Closure Reports; this Closure Report presents the closure activities related to 1675 Watkins Road. A Final Closure Report was submitted to Ohio EPA in March 2021 for closure activities at 1655 Watkins Road and received Ohio Environmental Protection Agency (Ohio EPA) approval on April 19, 2021.

1.1 General Property Information

The 1675 Watkins Road property, as shown on Figure 1, is currently owned by Garrison Southfield Park LLC (Garrison Southfield) and was formerly owned by MS-South LLC. Closed Loop leased the subject property and accepted electronic waste (e-waste) from 2012 through early 2016, when it ceased operations and abandoned the subject property. Closed Loop's principal operations involved the receipt, storage, and disassembling of cathode ray tube (CRT) containing materials. Figure 2 shows the approximate layout of the subject property.

1.2 Implementation Contractor Overview

EnSafe Inc. was contracted by King & Spalding LLP (as counsel for Garrison Southfield) to serve as the on-scene coordinator and project manager to manage and oversee the performance of closure activities conducted in accordance with the specifications in the Closure Plan. NovoTec Recycling, LLC (NovoTec) was contracted by Garrison Southfield and implemented the CRT and CRT-related materials removal actions. HEPA Environmental Services, Inc. (HEPA-ES) was contracted by Garrison Southfield to perform site preparation and building decontamination services. CompuPoint USA LLC (CompuPoint) was contracted by Garrison Southfield to collect, transport, and receive recyclable CRT materials.

[1] Garrison Southfield Park LLC also implemented the substantive closure performance standards in 40 Code of Federal Regulations Part 265, Subpart G and OAC Rules 3745-66-11 through 3745-66-15, as applicable or relevant and appropriate requirements under the Comprehensive Environmental Response, Compensation and Liability Act.

CompuPoint used Honey Bee Freight Group to transport the recyclable CRT materials to their recycling facility in Norcross, Georgia. MAX Environmental Technologies, Inc. (MAX) was subcontracted by NovoTec to receive CRTs and CRT-related materials for treatment and disposal as hazardous waste at its Resource Conservation and Recovery Act Subtitle C landfill in Yukon, Pennsylvania. MAX used several freight carriers including Action Resources, LLC, Dart Trucking Company Inc., and U.S. Bulk Transport, Inc. to transport the CRTs and CRT-related materials. Jess Howard Electric Company (Jess Howard) was subcontracted by NovoTec to perform electrical work.

1.3 Report Organization

This Closure Report is organized into the following six sections and eight appendices:

1. Section 1, Introduction: includes the purpose of the report, general property information, and implementation overview.

2. Section 2, Facility Description: provides a brief background of the property.

3. Section 3, Closure Activities: provides a description of the scope of work completed and includes an overview of site preparation, material processing and staging, material management and weight of waste removed, lead abatement and building decontamination, and air monitoring associated with the closure of 1675 Watkins Road.

4. Section 4, Compliance: discusses environmental, health and safety, and quality control measures that have been implemented in an effort to ensure the closure activities at the warehouse complied with the Closure Plan. Any changes to the Closure Plan are also discussed in this section.

5. Section 5, Conclusions and Recommendations: provides a summary of conclusions drawn from the completion of the closure activities at 1675 Watkins Road and includes recommendations based on the observations and data collected during the closure activities and final site conditions.

6. Section 6, References: includes a list of documents referenced in this report.

The following appendices are included in this report to provide additional documentation related to completion of the closure activities at 1675 Watkins Road:

- Appendix A: Photographs of 1675 Watkins Road
- Appendix B: Recycling and Waste Treatment and Disposal Documentation
  - — B1. Waste Disposal Summary Log — Max Environmental
  - — B2. Approved Waste Profile — Max Environmental
  - — B3. Land Disposal Notification and Certification Form — Max Environmental
  - — B4. Initial Waste Manifests and Packing Lists — Max Environmental
  - — B5. Final Waste Manifests and Weight Tickets — Max Environmental
  - — B6. Post-Treatment Analytical Data Summary — Max Environmental
  - — B7. Certificates of Treatment and Disposal — Max Environmental
  - — B8. Material Recycling Summary Log — CompuPoint
  - — B9. Bills of Lading and Material Packing Lists — NovoTec/CompuPoint
  - — B10. Certificates of Destruction and Recycling — CompuPoint
  - — B11. Decontamination Wastewater Profile — PennOhio
  - — B12. Decontamination Wastewater Disposal — Non-Hazardous Waste Manifests and Certificates of Disposal — PennOhio
  - — B13. Miscellaneous Waste Disposal Manifests and Certificates of Disposal — PennOhio
  - — B14. Universal Waste Disposal Records

— B15. Asbestos Waste Disposal Records

— B16. Scrap Metal Shipment Receipts — Ace Iron & Metal Company

— B17. Non-Hazardous C&D Waste Disposal Receipts — Frank Road Landfill

- Appendix C: Air Monitoring Data

— C1. Daily Dust Monitoring Data Log
— C2. Outdoor Dust Monitoring Data Log
— C3. NovoTec Employees' Personnel Air Monitoring Data
— C4. HEPA-ES Employees' Personnel Air Monitoring Data
— C5. EnSafe Air Monitoring Data

- Appendix D: Decontamination Wastewater Characterization Data

D1. Decontamination Wastewater Characterization Data
D2. Miscellaneous Waste Characterization Data
D3. Asbestos Testing Data
D4. Drywall Analytical Data
D5. Riser Pipe Soil Analytical Data

- Appendix E: Significant Correspondence Regarding Closure Activities

E1. Asbestos Abatement Notification to Ohio EPA
E2. OUPS Notification
E3. Disbursement Approvals by Ohio EPA
E4. Emergency Planning and Community Right-to-Know Act Notification
E5. 2021 Tier II Report Submittal

- Appendix F: EnSafe Weekly Update Reports

2.0 FACILITY DESCRIPTION

Closed Loop operated a CRT-related material storage facility within warehouses at 1655 and 1675 Watkins Road in Columbus, Franklin County, Ohio. These structures are commercial warehouses surrounded by commercial and industrial properties; a residential neighborhood is approximately 300 feet west of the warehouses. The 1675 Watkins Road warehouse is an approximately 290,000-square foot warehouse structure on a 9.21-acre parcel (Parcel ID: 010 001672-00). If this operation had been a legitimate recycling facility, the North American Industry Classification System for Closed Loop would be 42393, which includes recyclable material merchant wholesalers. Closed Loop operated under Environmental Protection Agency (EPA) Generator ID No OHR000167718.

Available information indicates that the two warehouses were constructed on former agricultural land in the late 1970s. City directories indicate that prior occupants of the 1675 Watkins Road warehouse were Applied Distribution (1981), Shoney's Restaurant/Shonac Corporation (1985 to 2002), and Value City Department Stores (2003). Closed Loop began operations in the 1675 Watkins Road warehouse in 2012, pursuant to a lease with MS-South LLC. Closed Loop ceased operations and abandoned the subject property in 2016.

A detailed facility description, previous investigations, and estimated quantities of CRT-related materials accumulated in the 1675 Watkins Road warehouse are provided in the Closure Plan.

Previous reporting by Atwell, LLC, indicates the following general information about Closed Loop's operations:

- E-waste materials received included: CRTs, projection televisions, and other e-waste for disassembly and recycling of some components
- Closed Loop disassembled televisions and computer monitors (CRT-containing devices) by separating plastics, precious metals, and CRT glass
- Closed Loop mechanically crushed CRT glass (funnel and panel) components in the 1675 Watkins Road warehouse
- Materials (plastics, metals, and crushed glass) were repackaged in open-top cardboard Gaylord boxes
- Crushed CRT glass was stockpiled onsite in Gaylord boxes

This page intentionally left blank.

3.0 CLOSURE ACTIVITIES

Pursuant to the Closure Plan and the substantive requirements of OAC 3745-55-11, the closure activities were designed to close the facility in a manner that:

> "(A) [m]inimizes the need for further maintenance; and (B) [c]ontrols, minimizes or eliminates, to the extent necessary to prevent threats to human health and the environment, post-closure escape of hazardous waste, hazardous constituents, leachate, contaminated run-off, or hazardous waste decomposition products to the ground or surface waters or to the atmosphere. . . ."

Pursuant to the Closure Plan (including the Engineering Evaluation/Cost Analysis in Appendix A of the Closure Plan), the closure activities were also designed to implement measures that will "reduce potential exposure hazards to construction workers, personnel, and visitors under current and future land use scenarios" and "reduce the exposure hazard to human health and environment from lead-containing materials."

This section provides a description of the scope of work completed and includes an overview of site preparation, material processing and staging, material management and weight of waste removed, lead abatement and building decontamination, and air monitoring associated with the closure of the former Closed Loop facility at 1675 Watkins Road.

Closure activities were observed and documented under the direction of Mr. Michael Johnson, P.E., of EnSafe. EnSafe's designated On-Scene Coordinator, Mr. B. Venky Venkatesh, managed and oversaw the performance of closure activities and ensured compliance with the Closure Plan. EnSafe's Mr. Kevin Losekamp assisted and supplemented the oversight activities. Project administrative duties, technical coordination, and management activities were performed by EnSafe's Project Manager, Mr. Edward Baker.

NovoTec was generally responsible for the removal, cleaning, repackaging, staging, loading, and disposal of e-wastes and recyclable material from 1675 Watkins Road. NovoTec was also generally responsible for disinfection services of the restroom facilities and support/office areas during removal activities in keeping with the Health and Safety Plan (HASP) and associated COVID-19 protocols; HEPA-ES was responsible for these services when NovoTec was not onsite. HEPA-ES was generally responsible for construction and maintenance of the contaminant reduction zone/clean loading zone (CRZ/CLZ) facilities, building decontamination services, and management of generated wastes related to these operations.

The closure activities at 1675 Watkins Road were successfully completed in accordance with the Closure Plan by implementing best management practices, risk mitigation strategies, established standard operating procedures included in the HASP, and experience from other projects.

Key milestone dates for the performance of the closure activities at 1675 Watkins Road are presented in Table 1.

Table 1
Key Milestone Schedule

Milestone Task	Date
Approval of Closure Plan by Ohio Environmental Protection Agency (EPA)	September 3, 2020
Follow-up notification to Ohio EPA of initiation of field activities (initial notification was made on May 18, 2020, pursuant to Section 8 of the Closure Plan)	September 8, 2020
Pre-Field Activities Virtual Meeting	September 8, 2020
EnSafe Inc. appointed as On-Scene Coordinator	September 9, 2020
Hazardous Waste Contingency Plan submitted to Franklin County Emergency Management and Homeland Security, Columbus Division of Fire, Columbus Police Department, and Grant Medical Center	September 17, 2020
Emergency Planning and Community Right-to-Know Act Sections 302 and 311 Notification (forklift batteries)	November 10, 2020
Initial Mobilization to the Site (as part of 1655 Watkins Road Closure Action)	September 21, 2020
First Shipment of E-Wastes from 1675 Watkins Road (Phase 1 Removal)	November 18, 2020
Conclusion of Phase 1 Removal from 1675 Watkins Road	February 10, 2021
Remobilization to the Site for Phase 2 Removal	September 13, 2021
Final Shipment of E-Wastes	August 03, 2022
Completion of Lead Abatement and Building Decontamination	August 11, 2022
Final Inspection of Warehouse	August 18, 2022

The following sections provide details of site activities performed to complete the closure of the former Closed Loop facility at 1675 Watkins Road. Photographs were taken periodically throughout the removal action to document the progress of work; selected photographs with brief descriptions are included in Appendix A. Representative photographs of pre-existing conditions are included in Appendix A (Photographs A01 to A13).

3.1 Mobilization and Site Preparation

Prior to the initiation of field activities under the Phase 1 removal actions, a virtual meeting was held with representatives of King & Spalding LLP (as counsel for Garrison Southfield), EnSafe, NovoTec, HEPA-ES, and CompuPoint. The purpose of the meeting was to discuss the project communication plan, schedule, and activities to be performed during the closure activities; to conduct

initial task coordination with project personnel; and to outline required health and safety, quality control, and associated reporting procedures, including COVID-19 protocols.

Mobilization included transporting personnel, equipment, materials, supplies, monitoring instruments, and associated services. NovoTec mobilized a temporary office trailer for use during the Phase 1 removal activities. NovoTec used the office space in 1675 Watkins Road for the Phase 2 removal activities. Field personnel and visitors parked their vehicles in the main parking lot for 1675 Watkins Road. Field personnel used two-way radios and cell phones for communication during the closure activities.

Field personnel attended a one-time, site-specific, health and safety orientation conducted by the on-scene coordinator at the site prior to beginning any field work. Thereafter, field personnel attended tailgate safety meetings held each morning of onsite activities. Utility workers were given a separate health and safety briefing and were escorted by one of the contractor employees. Utility workers were allowed inside the warehouse only when removal actions were not performed, or when such activities were limited to a different area of the building, in an effort to ensure no dust was generated near the utility work area. Dust monitoring was also performed near the utility work area as specified in Section 3.6 as an additional precaution. Personnel entering and exiting the Exclusion Zone, including utility workers, documented their entry/exit on the log maintained in the Support Zone. Field personnel maintained good housekeeping in the work areas to minimize slips, trips, and falls. Equipment, Gaylord boxes, pallets, and packing supplies were stored in an orderly manner.

Required site setup, preparation, and maintenance were performed by NovoTec, HEPA-ES, and Jess Howard as discussed below.

NovoTec cleaned and sanitized the office area and the restroom facilities at 1675 Watkins Road, which were used as the Support Zone for the duration of the field work. NovoTec placed a first aid kit, emergency eye wash kit, spill control kit, fire extinguisher, automated external defibrillator, and job site safety posters (U.S. Department of Labor and applicable federal regulations) in the Support Zone. Additionally, NovoTec placed a first aid kit, emergency eye wash kit, spill control kit, and fire extinguisher at the entrance to the Exclusion Zone at 1675 Watkins Road, by the CRZ/CLZ area, and by the temporary waste containment pad. NovoTec placed warning signs on the main doors to reduce the potential for trespassing and unauthorized entry into the warehouses. NovoTec moved some Gaylord boxes to make room in the area where HEPA-ES built the CRZ/CLZ chambers.

HEPA-ES sealed glass windows and doors with polythene sheeting and installed flaps made of plastic sheeting on the entry doors in the Support Zone and personal protective equipment (PPE) doffing area (i.e., the CRZ) to seal the Exclusion Zone. HEPA-ES installed and maintained a temporary containment pad in the northwest corner of 1675 Watkins Road for storage of generated decontamination wastewater until it was properly characterized and removed for offsite disposal.

Jess Howard installed the required power and outlets to charge the batteries for battery-powered forklifts, which were used to reduce the potential for generation of carbon monoxide. Jess Howard also installed the power panel required to operate the air blowers used by HEPA-ES.

3.2 Construction of Dust Control Containment Structure

To prevent lead-containing dust from exiting the warehouse during the removal of CRTs and CRT-related materials, an environmental containment structure was constructed by HEPA-ES in the northwest side of 1675 Watkins Road by loading dock numbers #8, 9, 10, 11 and 12. The containment structure was approximately 80 feet wide by 80 feet long, sealed from the ceiling to the floor, and connected to the wall on the loading dock side. This structure was comprised of two chambers, a CRZ area and a CLZ area. Refer to Figure 2 for the location of the CRZ/CLZ. Photographs of the containment structure are included in Appendix A (Photographs A14 to A17).

Prior to construction of the CRZ/CLZ chambers, the ceiling, wall, floor, and structural members within the CRZ/CLZ chambers were decontaminated as specified in Section 3.5. The CRZ/CLZ chambers were constructed of lumber frame and covered with polythene sheeting. The polythene sheeting was secured by staples and tape to keep sheeting from breaking loose. The lower 4 feet of the containment walls were reinforced with plywood sheets to prevent forklifts from damaging the structures. The CRZ/CLZ chambers were equipped with two curtain-style entry doorways (8 feet x 8 feet) to load materials using forklifts. To maintain negative air pressure in the chambers, eight 1,500 cubic feet per minute (CFM) air blowers were installed in the CRZ and four 1,500 CFM air blowers were installed in the CLZ. The air blowers were equipped with high-efficiency particulate air (HEPA) filters and additional pre-filters in an effort to ensure the exhaust was free of dust. The exhaust from these air blowers were vented into the warehouse, which was subject to air monitoring protocols as discussed in Section 3.6.

Two sets of forklifts were used for loading operations — one set of forklifts moved the packaged CRTs and CRT-related materials from the Exclusion Zone (i.e., warehouse side) and the second set of forklifts loaded these materials from the CLZ onto the trailers for offsite shipment. NovoTec routinely cleaned and mopped the floor in the CRZ/CLZ chambers. Additionally, during loading operations,

NovoTec sprayed the CLZ as needed with a fine water mist for additional dust suppression as discussed in Section 3.6.

HEPA-ES performed periodic maintenance of the CRZ/CLZ chambers as necessary and replaced the filters on a monthly basis. Used filter media were placed in Gaylord boxes with PPE and other debris and disposed of at MAX as discussed in Section 3.4.

3.3 Material Processing and Staging

The inspection process included an evaluation of the structural integrity of each Gaylord box, inspection of existing stretch film or shrink wrap, inspection of banding, and inspection of the wooden pallet. If a Gaylord box was determined to be in good condition and suitable for shipping, the box was moved to a designated processing area for cleaning, weighing, and labeling. If a Gaylord box was determined to be damaged and unsuitable for shipping, the box was (a) repaired (if possible); (b) the contents were emptied and re-packaged into a new Gaylord box; or (c) the contents were organized on wooden pallets and wrapped in stretch film in a manner suitable for shipping purposes. Damaged Gaylord boxes and wooden pallets were stacked, banded, and shipped to MAX for treatment and disposal as discussed in Section 3.4.

Stacked Gaylord boxes on pallets were safely removed by forklifts and placed on the floor for inspection by NovoTec. If the stacked Gaylord boxes could not be moved or lifted in a safe manner with a forklift, they were then allowed to fall to the floor, pushed over, or pulled down in a safe manner designed to protect the safety of site workers. The contents of collapsed/fallen Gaylord boxes were promptly collected and properly re-packaged into new Gaylord boxes suitable for shipment for recycling at CompuPoint or disposal at MAX.

Gaylord boxes containing whole CRT units, projection lenses, or unprocessed CRT tubes deemed suitable for recycling, were cleaned by HEPA vacuuming to remove lead-containing dust residue. Once cleaned, the boxes were labelled with stickers that read "Leaded Glass from Televisions or Computers; Do Not Mix with Other Glass Material," weighed, stacked on wooden pallets, and moved into the CLZ through the CRZ for shipment to CompuPoint.

Gaylord boxes containing unprocessed CRT tubes, steel with glass, contaminated plastic, plastic with metal, and other related CRT materials that were deemed unsuitable for recycling and were slated for treatment and disposal at MAX were covered in polythene liner and wrapped with tape. Any exposed surface of these Gaylord boxes and pallets were HEPA-vacuumed to remove lead-containing dust residue, weighed, and moved through the CRZ, into the CLZ, for shipment to MAX.

3.4 Material Management and Quantity of Wastes Removed

3.4.1 Cathode Ray Tube and Cathode Ray Tube-Related Materials

Once the cleaned and repackaged Gaylord boxes and materials on pallets were inside the CLZ, they were organized by lots and staged for shipment using forklifts dedicated to operations in the CLZ. A summary of materials shipped to MAX for treatment and disposal, or CompuPoint for recycling, was maintained by EnSafe. Appendix B (Tab B1) provides a summary of materials shipped to MAX, and Appendix B (Tab B8) provides a summary of materials shipped to CompuPoint. A photograph of the processed CRT materials inside the containment structure is included in Appendix A (Photograph A14).

Gaylord boxes containing unprocessed CRT tubes, steel with glass, contaminated plastic, panel with metal, and other CRT-related materials deemed unsuitable for recycling and slated for treatment and disposal were shipped to MAX using box trailers and/or dump trailers. Used PPE, floor sweepings, used filter media from air blowers in the CRZ and HEPA vacuums, used polythene sheeting from dismantling the CRZ/CLZ, duct tape, and other debris were also placed in Gaylord boxes and shipped to MAX. A waste profile was prepared and approved for disposal of these materials. A copy of the approved waste profile is included in Appendix B (Tab B2). A land disposal notification and certification form accompanied the first load shipped; a copy of this form is included in Appendix B (Tab B3). A hazardous waste manifest and a packing list accompanied each truckload. Copies of the initial hazardous waste manifests and packing list for loads shipped to MAX are included in Appendix B (Tab B4). Copies of the final facility-signed hazardous waste manifests and weight tickets for loads shipped to MAX are included in Appendix B (Tab B5). Copies of post-treatment analytical data, for each batch of waste treated at MAX prior to disposal at the MAX landfill, are included in Appendix B (Tab B6). Upon treatment and disposal of the materials, MAX provided a Certificate of Treatment and Disposal for each load of materials received. Copies of these certificates are included in Appendix B (Tab B7).

Gaylord boxes containing whole CRT units and projection lenses deemed suitable for recycling were shipped to CompuPoint using box trailers. A bill-of-lading and a packing list accompanied each truckload. Copies of the bill-of-lading and packing list are included in Appendix B (Tab B9). Upon recycling of the materials, CompuPoint provided a Certificate of Destruction and Recycling for each load of materials received. Copies of these certificates are included in Appendix B (Tab B10).

Table 2 reflects the weight of CRT and CRT-related waste identified during onsite activities and shipped offsite for recycling or treatment and disposal.

Table 2
Weight of Cathode Ray Tube and Cathode Ray Tube-Related Waste Removed from 1675 Watkins Road During Phase 1 and Phase 2[1]

Category	Pre-Project Estimate in Closure Plan	Actual Removed (Phase 1)	Actual Removed (Phase 2)	Total Removed (Phase 1 and Phase 2)	Variance	Percent Removed	Disposition
Non-processed CRTs/ Whole Units + Recyclable Plastic, Glass, and Steel	3,633,482 + 515,041 **Total = 4,148,523**	1,068,519	1,897,905	2,966,424	(1,182,099)	100%	Recycling at CompuPoint USA LLC (CompuPoint)
CRT Crushed/ Mixed Glass	113,750,757	11,482,783[2]	67,561,860[2, 3]	79,044,463[2, 3]	(34,706,294)	100%	Hazardous Waste Treatment and Disposal at MAX Environmental Technologies, Inc. (MAX)
Total	**117,899,280**				**(35,888,393)**		

Notes:
[1] All weights are gross weight in pounds; however, for billing purposes CompuPoint used net weight and NovoTec used gross weight.
[2] This value includes used personal protective equipment, floor sweepings, used filter media, used polythene sheeting from dismantling the CRZ/CLZ, used duct tape, and miscellaneous debris.
[3] This value also includes some non-processed CRTs that could not be recycled and/or segregated from other CRT materials.

To protect the Gaylord boxes from damage due to rain or snow during loading in dump trailers, a temporary awning structure was installed to cover two loading docks to divert rain and snow away from the dump trailer during loading operations. The awning structure was installed over Loading Docks #10 and #11 and maintained throughout the duration of the project. Photographs of the awning structure is included in Appendix A (Photographs A18 to A20).

3.4.2 Decontamination Wastewater

Decontamination wastewater was collected and stored in 55-gallon drums and/or 250-gallon totes. Prior to shipment of the decontamination wastewater, HEPA-ES collected a representative sample of wastewater for waste characterization as required by the treatment and disposal facility (PennOhio Corporation). A total of five composite samples (12/15/21, 2/17/22, 3/30/33, 6/9/22, and 7/7/22) were collected and analyzed at EA Group in Mentor, Ohio for toxicity characteristic leaching procedure (TCLP) metals using SW846-6010B/7470A methods. Laboratory data packages are included in Appendix D (Tab D1). Based on review of the initial laboratory analytical data, the wastewater was determined to be non-hazardous by HEPA-ES, and a waste profile was prepared for shipment to PennOhio Corporation. A copy of the waste profile is included in Appendix B (Tab B11). Further review of additional waste characterization samples collected also confirm that the wastewater was non-hazardous for disposal purposes. Six shipments (01/13/22, 03/03/22, 04/27/22, 07/05/22, 07/19/22 and 07/27/22 — approximately 26,600 gallons) of wastewater were transferred to tanker trailers using a vacuum truck and shipped to PennOhio for treatment and disposal. Copies of the final facility-signed waste manifests for shipments of wastewater to PennOhio are included in Appendix B (Tab B12). Upon treatment and disposal of the material, PennOhio provided a Certificate of Disposal, a copy of which is included in Appendix B (Tab B12). A photograph of the decontamination wastewater storage is included in Appendix A (Photograph A21).

At the end of the project, the used 55-gallon drums and 250-gallon totes were then decontaminated by pressure washing and triple rinsing and demobilized by HEPA-ES.

3.4.3 Miscellaneous Wastes

One 55-gallon drum of oily water (approximately 20 gallons) of unknown origin and a tote containing a small quantity of unknown liquid (approximately 50 gallons of what appeared to be rainwater) of unknown origin were found at 1675 Watkins warehouse. These two wastes were sampled on June 9, 2022, for waste characterization and analyzed at EA Group in Mentor, Ohio.

The oily water was analyzed for TCLP metals using SW846-6010B/7470A methods; benzene, toluene, ethylbenzene, and xylene (BTEX) using SW846-8260A method; and flashpoint using

SW846-1010 method. The unknown liquid was analyzed for TCLP metals using SW846-6010B/7470A methods; TCLP volatile organic compounds using SW846-8260A; TCLP semi-volatile organic compounds using SW846-8270C; pH using SW486-9041A; and reactivity using SW846-7.3.3.2 and 7.3.4.2 methods. A copy of the laboratory data package is included in Appendix D (Tab D2). Based on review of the laboratory analytical data, these wastes were determined to be non-hazardous by HEPA-ES and PennOhio, and therefore, disposed of along with the decontamination wastewater.

There were a few 1-gallon cans of unused elevator cleaning oil found in the elevator room; additionally, there were a few 5-gallon pails of unused latex paints and a few 5-gallon pails of unused tile adhesives found in the mechanic room. These virgin materials were consolidated in to three 55-gallon drums and shipped to PennOhio for disposal. Copies of the waste profile, final facility-signed waste manifest, and certificate of disposal for shipment of these materials to PennOhio are included in Appendix B (Tab B13).

There was a box of fluorescent lights in the warehouse along with two old refrigerators. These are considered universal wastes and were transported offsite by HEPA-ES for proper disposal. The fluorescent lights were disposed of at Labpacks Unlimited in Ashtabula, Ohio by HEPA-ES. The refrigerators were removed from the warehouse by HEPA-ES and sent to Halo Heat & Climate in Avon, Ohio, for freon recovery and proper disposal. Disposal records for these universal wastes are included in Appendix B (Tab B14).

3.5 Lead Abatement and Building Decontamination

The warehouse was divided into 23 areas as shown on Figure 2. After NovoTec removed e-wastes from any given area, HEPA-ES installed polythene barrier sheeting from the ceiling to the floor to enclose the area while abatement was performed inside that area, so as to allow NovoTec to continue its removal activities in other areas of the warehouse without contaminating the area being abated by HEPA-ES. Once the polythene sheeting barrier was installed, the electrical outlets, door openings, heaters, and lighting fixtures within the area to be cleaned were wiped with rags soaked in Simple Green and sealed with plastic sheeting and/or wrapped in duct tape to protect them from water damage during pressure washing.

Prior to decontaminating building surfaces, floor cracks wider than 1/8-inch were inspected to evaluate the potential for lead migration, cleaned with a HEPA vacuum to remove dust, and then filled with silicone caulk to prevent vertical migration of decontamination wastewater. Holes and spalled concrete on floors were inspected to evaluate the potential for lead migration, cleaned with a HEPA vacuum to

remove dust, and then filled with polyurethane foam to prevent vertical migration of decontamination wastewater.

Once these preparation activities were completed in the area, the ceiling, wall, and structural members were decontaminated by spraying with Simple Green and triple washing with a high-pressure/ low-volume power washer. Once the ceilings, walls, and structural members were decontaminated, the floor was also decontaminated by spraying with Simple Green and triple washing with a high-pressure/low-volume power washer. Additionally, the emergency exit doors, windows, exhaust fans, and loading dock doors were wiped with rags soaked in Simple Green. The space underneath the loading dock plates were also cleaned by HEPA vacuuming the surfaces. The decontaminated surfaces were periodically inspected by the EnSafe on-scene coordinator or his designee for visible dust and to verify compliance with the performance-based standard (i.e., the "clean debris surface" as defined in OAC 3745-270-45, Table 1) specified in the Closure Plan.

The decontamination wastewater from the floor was collected using a squeegee and wet floor vacuum, transferred into 55-gallon drums and/or 250-gallon totes, and stored in the temporary storage containment for waste characterization and offsite disposal, as discussed in Section 3.4.

The drywalls around the office area and the restroom area (located on the northwestern end of 1675 Watkins Road) were cleaned using a vacuum equipped with a HEPA filter and wiped with rags soaked in Simple Green, in accordance with the Closure Plan.

The insulation on the heating & ventilation ducts in the warehouse were removed and placed in Gaylord boxes for shipment to MAX, as discussed in Section 3.4. Similarly, the used polythene sheeting, duct tape, HEPA filters, rags, and other debris were placed in lined Gaylord boxes for shipment to MAX, as discussed in Section 3.4.

Prior to final demobilization, the entire warehouse floor was cleaned for the last time with a wet mechanical floor scrubber. The water from the floor scrubber was transferred into 250-gallon totes and stored in the temporary storage containment for waste characterization and offsite disposal, as discussed in Section 3.4.

Photographs of building decontamination are included in Appendix A (Photographs A22 to A30).

3.6 Dust Minimization and Air Monitoring

To reduce and control the potential for lead-dust generation during removal actions, the following procedures were implemented on an as-needed basis.

- Newly exposed floor areas (e.g., areas from which containerized materials had been removed) were swept and cleaned after wetting the areas with a fine water mist.
- Forklift travel areas were routinely sprayed with a fine water mist and cleaned by wet sweeping.
- The floor of the CRZ and CLZ was cleaned periodically using wet sweeping methods.
- A fine water mist was applied over the Gaylord boxes and CRT materials that were pushed to the floor during removal operations.

Dust levels in the warehouse were maintained below the action levels specified in the HASP (Appendix C of the Closure Plan) by routinely applying water mist during removal actions, HEPA vacuuming of Gaylord boxes and pallets, and minimizing exposed areas by concentrating removal activities in smaller work areas..

A DustTrak II Aerosol Monitor 8530 was used to evaluate airborne dust inside the warehouse during removal activities. The dust monitor was calibrated daily prior to use as per the manufacturer's instructions. The dust monitor was kept close to the area with the most potential for dust generation and moved around periodically throughout the work area during the removal action. A copy of the daily dust monitoring logs is included in Appendix C (Tab C1).

In addition to indoor dust monitoring activities, air monitoring was performed outside the warehouse buildings on a monthly basis at eight locations around the perimeter, as noted on the dust monitoring logs. Outdoor air monitoring data indicates that the outdoor air was not impacted by removal activities inside the warehouses. A copy of the outdoor dust monitoring data logs is included in Appendix C (Tab C2).

Periodic personnel air monitoring was performed by NovoTec and HEPA-ES to evaluate employee lead dust exposure and to maintain the appropriate level of respiratory protection. At a minimum, the personnel air monitoring samples were collected monthly from the breathing zone for 20% of the total onsite crew. The selection of the personnel for air monitoring was based on the staff with the most potential for dust exposure during removal actions. EnSafe also collected independent

air samples from a select group of these employees. The sample results from the air monitoring conducted by NovoTec, HEPA-ES, and EnSafe indicated that the employee exposure limits specified in the HASP were met with initial test or a follow-up test with all employees meeting the blood lead testing levels. Copies of laboratory data are included in Appendix C (Tab C3 — NovoTec Employee Data; Tab C4 — HEPA-ES Employee Data; and Tab C5 — EnSafe Sample Data).

3.7 Miscellaneous Activities

The following sections provide details of additional work completed at the 1675 Watkins Road.

3.7.1 Asbestos Abatement

The floor tile and mastic in the office area was sampled for asbestos. The asbestos sampling was performed by HEPA-ES on November 17, 2021, and analyzed by Eurofins in Cary, North Carolina. The floor tile and leveling compound were determined to be asbestos-free; however, the mastic was determined to contain chrysotile. The analytical data package for the asbestos samples is included in Appendix D (Tab D3). HEPA-ES performed the abatement of the mastic in the office area in December 2021. Since the total abatement area was less than 160 square feet, notification to Ohio EPA was not required. In April 2022, HEPA-ES noticed a similar floor mastic in front of the elevator on the southwest corner of the warehouse. The floor tile had been removed in the past by others; however, the mastic had not been completely removed. Therefore, HEPA-ES completed the abatement of the floor mastic in May/June 2022 after notification to Ohio EPA in April 2022. Copies of the notifications to Ohio EPA are included in Appendix E (Tab E1). Asbestos wastes were disposed of at the Countywide Recycling & Disposal Facility in East Sparta, Ohio, by HEPA-ES, and disposal records from December 2021 and May/June 2022 abatement activities are included in Appendix B (Tab B15).

3.7.2 Removal of Crushing Equipment and Partitioning Drywall

Electrical power to the machinery inside the Crusher Room had been disconnected by NovoTec prior to pressure washing and cleaning the equipment by HEPA-ES. The crusher, conveyors, dust collectors, and other equipment were decontaminated by spraying with Simple Green and triple washing with a high-pressure/low volume power washer. The decontamination water from pressure washing the equipment was collected in totes for characterization and offsite disposal as discussed in Section 3.4. After the equipment had been visually inspected by EnSafe, it was verified to be clean by checking the pH of the final rinse water to be at 7. Cleaned equipment was dismantled into smaller manageable pieces and sent for recycling at Ace Iron & Metal Company in Columbus, Ohio. Copies of the scrap metal receipts are included in Appendix B (Tab B16). Representative photographs of crushing equipment (before and after cleaning) are included in Appendix A (Photographs A31 to A42).

A representative sample of the partition wall enclosing the crusher room was collected and analyzed for TCLP metals at EA Group laboratory in Mentor, Ohio. The results indicate that the drywall could be managed as non-hazardous waste. Additionally, the drywall material was also tested for asbestos by Gandee & Associates, Inc. of Westerville, Ohio and confirmed to contain no asbestos. Copies of the TCLP analytical data and asbestos testing data of the drywall are included in Appendix D (Tab D4).

The partition walls enclosing the crusher room were demolished after the equipment in the crusher room was removed. Prior to demolition, both sides of the drywall were cleaned by wiping with Simple Green to remove any surficial dust. Uncontaminated debris such as wood, metal frames, and drywall removed from the partition walls enclosing the crusher room was disposed of as non-hazardous construction & demolition (C&D) debris at the Franklin County Sanitary Landfill in Grove City, Ohio. Six loads were transported from the warehouse and receipts for these C&D debris disposals are included in Appendix B (Tab B17).

3.7.3 Floor Trench and Associated Pipeline

An existing floor trench (approximately 6-inches deep by 6-inches wide) was observed inside the north end of the building, as shown on Figure 2. The T-shaped trench (approximately 30-feet long) was first noted on January 11, 2022, during routine cleanup operations and Ohio EPA was notified at that time. The trench floor drain was visually inspected, and no cracks were observed. A 4-inch polyvinyl chloride (PVC) pipe was connected to the trench. A schematic of the pipe and the trench floor drain are shown in Figure 3. Based on video inspection of the pipe, the pipe at the north end of the trench was blocked approximately 5 feet north of the exterior wall. It was decided that the pipe would be investigated by digging around the pipe when the weather was favorable.

An investigation of the PVC pipe was conducted on June 28, 2022, by HEPA-ES and observed by EnSafe. HEPA-ES notified Ohio Utility Protection Service (OUPS — 811) for utility clearance prior to excavation. A copy of the OUPS notification is included in Appendix E (Tab E2). The pipe appeared to run under the breezeway (between the 1655 and 1675 Watkins Road buildings) and opened into a dry swale on the east side of the breezeway. The swale, which is presumed to be part of the original building design, slopes towards the railroad tracks off the property. In addition to the blockage near the north wall of the 1675 Watkins Road building, the PVC pipe appeared to be blocked with gravel/sand at the elbow outside the building and at the limits of the breezeway. It is not clear if the blockages were intentional or unintentional. There was no evidence of crushed glass inside the pipe and visual assessment of the soil surrounding and beneath the pipe did not identify any discoloration of soil or odor. Since the pipe was not connected to any storm sewer or sanitary sewer line, the pipe was removed from the edge of the building to limits of the breezeway, where the pipe had been blocked.

The pipe underneath the breezeway was left in place as it was already blocked with gravel/sand. The excavation was backfilled to original condition. HEPA-ES sealed the hole on the building wall and filled the trench inside the building with concrete. Because there was no evidence of crushed glass inside the pipe, the soil around the pipe did not appear impacted, the pipe was removed, and the trench was filled, no further action is warranted. Photographs of the excavation activities and floor drain are included in Appendix A (Photograph A43 to A56).

3.7.4 Elevator

During the wall cleaning, an old elevator was found behind a previously boarded-up plywood wall on the southwest corner of the building. The approximate location of the elevator is shown on Figure 2. The elevator had been taken out of service in 2002, per the inspection record. The building maintenance company (JLL) believed it was shut down prior to Garrison Southfield buying the property and prior to Closed Loop operations. JLL contracted KONE Elevators & Escalators (KONE), an elevator service company, to inspect the elevator. KONE confirmed that the elevator is a pit-less, hydraulically operated unit and had been properly taken out of service (i.e., power disconnected and the hydraulic oil drained). The elevator control room was cleaned, and the elevator cleaning oil cans (stored in a cabinet) were disposed of as described in Section 3.4.3. Photographs of the elevator and the elevator room are included in Appendix A (Photograph A57 to A62). No further action is warranted.

3.7.5 Riser Pipe Pit

Two of the nine riser pipes (Riser Pipes #8 and #9) associated with the fire suppressant system on the east side of the warehouse have sub-floor openings. Each of these sub-floor openings is approximately 40 inches by 80 inches by 36 inches deep. The bottom of these two pits is filled with gravel (below the 3-foot level). A few pieces of glass were observed inside the pits and were removed before these pits were HEPA-vacuumed and cleaned. Additionally, prior to decontamination of the building floor in that area, the pits were covered with polythene sheeting and taped to prevent water entering the pits. To assess the potential for a release of lead-containing material to these pits, the following tasks were performed on August 19, 2022:

1. The gravel in each pit surrounding the risers was removed, stockpiled on plastic sheeting, and replaced back in the pit once the sample was collected.

2. Once the base of the pit was exposed, an aliquot of soil was removed from the top 3 inches of soil using a decontaminated stainless-steel spoon.

3. The aliquot was homogenized in a decontaminated stainless-steel bowl and transferred to labeled laboratory-supplied containers.

4. One container from each pit was submitted to EA Group for laboratory analysis of total lead by EPA Method SW-846 6010B.

5. The second container from each pit was held at the laboratory for future TCLP analysis if the laboratory reported greater than 100 parts per million (ppm) of lead in the original associated sample.

The two soil samples indicate presence of low levels of lead at concentrations of 16.0 milligrams per kilogram (mg/kg) and 6.30 mg/kg. These reported sample results are well below the Ohio EPA's 400 mg/kg residential screening standard (Chemical Information Database and Applicable Regulatory Standards database) Additionally, these reported sample results are also below the Ohio EPA's calculated background concentration of 41.5 mg/kg for lead for Franklin County soil (Ohio EPA 2013). Because the two samples collected from sub-floor openings associated with riser pipes are below applicable screening criteria, no further action is warranted. A copy of the analytical data package is included in Appendix D (Tab D5). Representative photographs of the riser pipes and sampling activities are included in Appendix A (Photographs A63 to A70).

3.8 Final Inspection and Demobilization

Representatives from King & Spalding LLP (as counsel for Garrison Southfield), EnSafe, Ohio EPA, and the Ohio Attorney General's office participated in an inspection of 1675 Watkins Road on August 18, 2022. During the inspection, Ohio EPA inquired about the exposed gravel/soil inside the two pits associated with the fire suppressant riser pipes. As noted in Section 3.7.5, the soil in these pits was analyzed and the results were determined to warrant no further action. With this issue resolved, 1675 Watkins Road was thereafter turned over to Garrison Southfield, by EnSafe, on August 29, 2022.

Representative photographs were taken at the conclusion of the closure activities at 1675 Watkins Road and are included in Appendix A (Photographs A71 to A81). Prior to the final inspection, field equipment, supplies, temporary facilities, and other miscellaneous items (e.g., barricades, caution tapes, and signs) resulting from, or used during the field operations, were removed.

3.9 Summary of Project Costs for Closure Activities

The project costs for closure activities related to 1675 Watkins Road is approximately $11,214,268, with a breakdown of these costs provided in Table 3.

Invoices from NovoTec, CompuPoint, HEPA-ES, and EnSafe related to the closure activities at 1675 Watkins Road were submitted to Ohio EPA for review. Once reviewed by Ohio EPA and determined to be necessary costs consistent with the Closure Plan and the National Contingency Plan, these invoices were forwarded to the Ohio Attorney General for disbursement or disbursement approval for later reimbursement to Garrison Southfield. Copies of these disbursement determinations are included in Appendix E (Tab E3).

Table 3
Summary of Project Costs

Contractor	Estimate in Closure Plan	August 2022 Estimate[1]	Variance
NovoTec Recycling, LLC: (a) e-waste removal, transportation, and recycling and/or disposal; (b) 50% credit for costs for installation, maintenance, and repairs of awning structure; and (c) removal and disposal of the crushing equipment	$12,318,493	$9,532,135	($2,786,358)
CompuPoint USA: e-waste transportation and recycling	$0	$172,890	$172,890
HEPA Environmental Services, Inc.: (a) contamination reduction zone construction and maintenance; (b) lead abatement and decontamination; (c) demolition of dry wall surrounding the crushing equipment; and (d) asbestos abatement	$920,200+$49,600 Total $969,800	$895,516	($74,284)
EnSafe Inc.: (a) project management; (b) closure report; and (c) costs for installation, maintenance, and repairs of awning structure	$726,449	$515,027	($211,421)
Estimated additional utility charges	$0	$98,700[2]	$98,700
Total	$14,014,742[3]	$11,214,268	($2,800,473)

Notes:

[1] This is estimated value based on invoices submitted through August 31, 2022; additional invoicing is expected from HEPA-ES and EnSafe for work completed beyond the invoicing period.

[2] This value is estimated at $4,700 per month based on increased utility usage during the removal activities from February 2021 to September 2022.

[3] This value did not include response costs that had been incurred prior to Closure Plan approval to investigate, manage, and prepare for removal of containerized CRT-related materials (including crushed CRT glass), CRT demanufacturing areas, and residual lead dust contamination. See Section 4.2.3, Engineering Evaluation/Cost Analysis.

4.0 COMPLIANCE

This section presents a discussion of the environmental, health and safety, and quality control measures implemented pursuant to the Closure Plan. Field work was performed in compliance with substantive requirements of local, state, and federal environmental regulations identified in the Applicable or Relevant and Appropriate Requirements included in the Closure Plan.

In accordance with OAC 3745-66-12(A), a copy of the Closure Plan and associated revisions was maintained at the office area in 1675 Watkins Road.

Since Ohio EPA personnel were not authorized to conduct physical site visits due to the COVID-19 pandemic, periodic virtual tours were conducted for Ohio EPA representatives to review the progress of the field work. In-person inspections were resumed by Ohio EPA after COVID-19 restrictions were removed. Additionally, the Columbus Fire Department performed periodic inspections.

4.1 Environmental

The EnSafe on-scene coordinator was designated as the qualified, independent, registered, professional engineer's representative for oversight of field activities. The on-scene coordinator or his designee was present during field activities.

CRT and related materials from 1675 Watkins Road have been successfully removed, cleaned, repackaged as needed, and shipped offsite for recycling or waste treatment and disposal under the supervision of the on-scene coordinator or his designee. Similarly, the site preparation, lead abatement, and building decontamination activities have been successfully completed under the supervision of the on-scene coordinator or his designee. There were no known or suspected releases of CRT and related materials to soil at the 1675 Watkins Road during the closure activities. The overall closure activities meet the performance-based standard specified in the Closure Plan.

Battery-powered forklifts were used to move the Gaylord boxes. Since these batteries contain sulfuric acid and lead, a notification related to the storage of these hazardous chemicals at the warehouses was sent to the State Emergency Response Commission to satisfy the requirements of Emergency Planning and Community Right-to-Know Act Sections 302 and 311. A copy of this notification is included in Appendix E (Tab E4). Additionally, a copy of Tier II Emergency and Hazardous Chemical Inventory notification for the 2021 calendar year is included in Appendix E (Tab E5).

4.2 Health and Safety

The HASP provided the basic framework for the safe handling and removal of waste materials from the warehouse and the lead abatement and decontamination of the building. Field personnel including contractors, utility workers, and visitors entering the Exclusion Zone were required to sign a signature sheet acknowledging that they have read, understood, and would comply with the provisions of the HASP.

The HASP required job hazard analyses that addressed the following field tasks to analyze job-related hazards and to identify means for their elimination or control as necessary to protect human health and the environment.

- Task 1 — Construction of dust control containment structures
- Task 2 — Movement and relocation of CRT materials
- Task 3 — Evaluation of CRT material container condition
- Task 4 — Decontamination of CRT material containers
- Task 5 — Preparation of CRT material containers for shipping
- Task 6 — Transfer of CRT materials to the designated loading zone for shipment
- Task 7 — Daily cleaning of work areas
- Task 8 — Final equipment decontamination
- Task 9 — Closed Loop equipment decontamination
- Task 10 — Building decontamination

The EnSafe on-scene coordinator or designee coordinated all aspects of the site health and safety activities. Additionally, each onsite contractor (NovoTec and HEPA-ES) had a designated site safety officer (SSO). The SSO was responsible for the implementation of the HASP with respect to their company's work activities. The SSO was responsible for providing field supervision, establishing and maintaining restricted work areas, enforcing safe work and hygiene practices, performing COVID-19 related safety requirements (e.g., temperature checks, wearing face coverings, social distancing, and disinfections of high-traffic and touch-point areas), requiring proper use of PPE, and communicating approved modified safety requirements to site personnel. In coordination with the SSO, the EnSafe on-scene coordinator or designee performed the following tasks to comply with the HASP and safe performance of the closure activities:

- Conducting daily health and safety field meetings
- Conducting periodic safety inspections
- Maintaining first-aid kits, fire extinguishers, and automated external defibrillators as needed

- Conducting site-specific employee training and information sessions
- Conducting air monitoring as specified in the HASP
- Completing and maintaining necessary health and safety recordkeeping
- Maintaining, inspecting, and controlling adequate inventory of safety equipment and supplies
- Performing and monitoring equipment and personnel decontamination procedures

NovoTec and HEPA-ES employees working in the Exclusion Zone had the required Occupational Safety and Health Administration training as specified in the HASP. In addition, these employees provided medical clearance and respirator fit testing certificates issued by their respective occupational medical provider. Pre-work and periodic blood lead test clearance data was provided by NovoTec and HEPA-ES for their employees working in the Exclusion Zone. Additionally, post-work blood clearance data was submitted by EnSafe, NovoTec, and HEPA-ES for their employees. Copies of these training records and medical clearance certificates were maintained in the 1675 Watkins Road office area during the removal action by the on-scene coordinator and retained as part of the project records.

Personnel air monitoring and dust monitoring were performed as specified in Section 3.6.

There were no Occupational Safety and Health Administration recordable health and safety incidents or accidents during the 1675 Watkins Road removal action.

4.3 Quality Control

The project team's primary objectives included no compromising of functional, health, or safety requirements; meeting or exceeding expectations consistent with the appropriate technical, aesthetic, and regulatory criteria; and conforming to the Closure Plan. The on-scene coordinator or his designee maintained the quality of field activities and project deliverables, including sampling and analysis, record keeping, project meetings, progress reports, and other reports.

A virtual meeting was held with King & Spalding LLP (as counsel for Garrison Southfield), EnSafe, NovoTec, and HEPA-ES prior to the initiation of onsite activities as part of Phase 1 removal in 1655 Watkins Road and continued with Phase 2 removal in 1675 Watkins Road. In-person and virtual project meetings were held periodically thereafter by King & Spalding LLP (as counsel for Garrison Southfield), EnSafe, NovoTec, and HEPA-ES during the performance of closure activities to monitor progress and to coordinate removal, disposal, lead abatement, and building decontamination activities.

Weekly progress reports were prepared by the on-scene coordinator and submitted to King & Spalding LLP (as counsel for Garrison Southfield). Copies of these reports are included in Appendix F.

4.4 Field Changes to Closure Plan

A paragraph discussing the dust monitor action levels on page C-1-5 in Appendix C1 (Air Monitoring) of the HASP (which is Appendix C of the Closure Plan), had to be revised because the calculation was based on a hypothetical lead concentration of 25,000 mg/kg; however, the actual highest concentration of lead in the warehouses was 15,000 mg/kg, based on previous investigations. Therefore, to clarify the action levels for the dust monitor, this paragraph was revised as follows:

> *Lead (with an EL of 0.05 mg/m^3) is the contaminant of concern and a maximum bulk sample concentration of 15,000 mg/kg has been identified in the warehouses (refer to 2.1.3 of the Closure Plan). Depending on the SF used, the theoretical total dust concentration will range between 3.33 to 0.33 mg/m^3. This means that when the in-situ particulate monitoring device is registering a concentration within 3.33 to 0.33 mg/m^3 range, there is a high probability that this dust contains enough lead to equal and/or exceed the EL. A Level C PPE with a half face respirator and P100 cartridge provides a Protection Factor (PF) of 10. Therefore, the in-situ particulate monitoring can be in the range of 0.33 to 3.33 mg/m^3 without triggering the EL exceedance. The use of level C PPE would be evaluated to be effective as documented by personal monitoring. If dust monitoring exceeds 0.33 mg/m^3, engineering controls will be evaluated. If dust monitoring exceeds 3.33 mg/m^3 then work will stop, and PPE will be reevaluated and upgraded as necessary.*

5.0 CONCLUSIONS/RECOMMENDATIONS

Closure of 1675 Watkins Road was successfully accomplished by the removal of CRTs and CRT-related materials from the warehouse and abatement of lead-containing dust inside the warehouse. As stated in Section 7.2 of the Closure Plan, "[u]pon completion of closure, the warehouse will be available for unrestricted use."

EnSafe concludes that the removal actions and associated closure activities conducted at 1675 Watkins Road meet the closure requirements outlined in the Closure Plan, based on the observations made during the closure activities; results of the final inspection performed by representatives from King & Spalding LLP (as counsel for Garrison Southfield), EnSafe, and Ohio EPA; and information provided in this report. Specifically, the closure activities at 1675 Watkins Road meet the substantive closure performance standard specified in OAC 3745-55-11(A and B).

EnSafe accordingly requests that Ohio EPA issue a written determination to Garrison Southfield providing that 1675 Watkins Road has been closed in accordance with the Closure Plan and all appropriate hazardous waste rules and, therefore, no further action is required.

Subject: Form U Submission MAX ENV TECH INC YUKON FAC, CLOSED LOOP REFINING & RECOVERY INC, EC# 2484510: No Objection
Date: Mon, May 16, 2022 8:38 am

Thank you for using DEP's web-based system to submit the Form U, the request to process or dispose residual waste! This e-mail serves as official notification that DEP has reviewed the Form U and corresponding attachments for the MAX ENV TECH INC, MAX ENV TECH INC YUKON FAC, CLOSED LOOP REFINING & RECOVERY INC, NON-HAZ RESIDUE FROM TREATMENT OF HAZ WASTE (OTHER THAN 203, EC# 2484510.

As an operator of a DEP regulated waste management facility, you may receive the waste stream in accordance with your permit conditions.

If you have questions about the Form U or the technical review, respond by using the Reply function of this e-mail. The tracking number for the MAX ENV TECH INC, MAX ENV TECH INC YUKON FAC, CLOSED LOOP REFINING & RECOVERY INC submission is EC# 2484510. Please include EC# 2484510 in all correspondence.

Thank you,

Robert Popichak

Location of Waste Generation and Storage

Is the waste generated at the Company Mailing Address (noted above)	YES
If 'No', describe location of waste generation and storage below.	
If 'No', in what state is the waste generated?	
If in PA, select a County and Municipality	

WASTE DESCRIPTION

Residual Waste Code	902 - NON-HAZ RESIDUE FROM TREATMENT OF HAZ WASTE (OTHER THAN 203
(If Other, please specify)	
Amount	3000 Tons
Time Frame	One Time Event
(If Other, please specify)	

General Properties

a.	pH Range?	9 to 12.28
b.	Physical State	Solid (EPA Method 9095)
c.	Physical Appearance	
	Color	various
	Odor	none
	Number of Solid or Liquid Phases of Separation	1
	Describe each phase of separation.	
	solid	
d.	Attached is information from the generator certifying that a hazardous waste determination has been done and that the waste is not hazardous waste as defined in 40 CFR 261, as incorporated by reference at 25 Pa. Code 261a1.	YES

Caution: If 'No', the application form is incomplete.

e.	Is the waste treated hazardous waste?	YES
	If 'Yes', list the hazardous waste code(s) that apply to the hazardous waste before treatment.	
	D008	
	If 'Yes', what treatment option was selected?	
	Chemical/physical stabilization	
	What limit was required to be met by the treatment option?	
	40 CFR 268 UTS	
	Provided a copy of the certification required under 40 CFR 268.7(a), as incorporated by reference at 25 Pa. Code 268.1, that the waste meets all the land disposal restriction requirements, as specified in 40 CFR Part 268, Subpart D. (Land Disposal Restrictions-Treatment Standards)	YES
f.	Has this waste been delisted as a hazardous waste by DEP or US EPA?	N/A or Waived
g.	Has the waste been accepted for disposal/processing of the waste at another PA facility been submitted?	NO
	If 'Yes', list the facility permit ID number(s).	
h.	Has an application for disposal/processing of the waste at another PA facility been submitted?	NO
	If 'Yes', list the facility permit ID number(s).	

Chemical Analysis Attachments

a.	Has a detailed physical, chemical and radiological characterization of the waste and its leachate been conducted?	YES
	If 'No', provide detailed explanation supporting use of generator knowledge in lieu of actual chemical analysis.	
	If 'Yes', attached is a description of the waste sampling methods in accordance with the waste sampling plan as required in 271.611(a)(3) or 287.132(a)(3).	YES
b.	Laboratory Registration Number	65-01467

Process Description and Schematic Attachments

a.	Attached is a detailed description of the manufcaturing and/or pollution control processes producing the waste.	NO
	If 'No', provide explanation.	
	CRT glass, dust, and associated debris from former CRT warehouse/processing/recycling operation.	
b.	Attached is a schematic of the manufacturing and/or pollution control processes producing the waste.	NO
	If 'No', provide explanation.	
	Refer to above description.	

Chemical Analysis Waiver

Categories of residual wastes that qualify for the waiving of chemical analysis by the Department and that the waste proposed to be accepted for the disposal are listed below.

If 'Other', please specify

PROPOSED PROCESSING, STORAGE AND/OR DISPOSAL METHOD

	Will any special handling procedures (besides direct disposal) described in the waste	YES

acceptance plan, be used when managing the waste?

If 'Yes', describe.

treatment/processing

Is this material re-used for construction or operation of the facility? NO

If 'Yes', describe.

SOURCE REDUCTION STRATEGY

Form 25R must be completed by the generator and attached to this application unless waived in the instructions to that form.

Form 25R attached. N/A or Waived

GENERAL COMMENTS FROM APPLICANT

This Form U is being submitted to increase the volume of a previously approved Form U EC #2213274, EC #2225943, EC #2232668, EC #2248046, EC# 2268737, EC #2359755, EC #2381996, EC#2392641, EC #2403430, EC #2411078, EC #2416279, EC#2435598, EC#2246663 from a combined 41,000 tons by an additional 3,000 tons (totaling 44,000 tons).

Customer Name: Closed Loop Refining and Recovery, Inc.

Customer Mailing Address: 1675 Watkins Road, Columbus, OH 43207

Contact Name: Tom Bolon

E-mail Address: tbolon@novotecrecycling.com

Phone/Fax Numbers: 614-296-8565 (c), 614-236-2221 (o)

SITE INFORMATION

Site Name: Former Closed Loop Refining and Recovery, Inc. Site

Site Address (if different from mailing): 1675 Watkins Road, Columbus, OH 43207

Volume (Tons ☑ Gallons ☐) 3,000 Annually ☐ Monthly ☐ One Time Event ☑

Color: various Odor: none

Physical Condition of Waste: solid Percent Liquid/Solid: 100% solid

Specific Gravity (water = 1.0) and Density: _____ (estimated or measured)

Waste Generation Process Description (attached schematic if needed): CRT glass, dust, and associated debris from former CRT warehouse/processing/recycling operation

Source of Contamination: lead from CRT glass
(Attach schematic and description of process, including background documentation, if appropriate)

Check all that apply:

Yukon treatment/processing? ☑ Yukon Landfill 6 disposal? ☑

Bulger treatment/processing? ☐ Bulger beneficial use? ☐

Is this waste a RCRA hazardous waste? Yes ☑ No ☐

If yes, describe and list the RCRA waste codes:

D008 - lead

Generator hazardous waste ID# OHR000167718

USDOT proper shipping name, UN/NA number and hazard class (if applicable)

RQ, hazardous waste, solid, N.O.S. NA3077, 9, PGIII (lead)

Shipping Information (bulk liquid, bulk solid, bulk sludge, drums/totes): bulk solid, totes

If this waste is a PA residual waste, describe and list the DEP residual waste codes:

Attach chemical analysis reports. See analytical summary requirement pages. (Laboratory data must be no older than one year from the date of this submittal. Chemical analysis must be performed by a PA registered or accredited laboratory. Other supplemental data may be requested). Attach safety data sheets as needed.

~~GENERATOR~~ CERTIFICATION

I hereby certify that all information on this and all attached documents are true and that this information accurately describes the waste. I further certify that all samples and analyses submitted are representative of the subject waste in accordance with the procedures established in 40 CFR 261 Appendix I or by using an equivalent method allowed by the PA Department of Environmental Protection. I also certify that this waste does not contain >50ppm PCBs and does not contain >500ppm volatile organic compounds.

SAMPLING AND TESTING PLAN

Closed Loop/Garrison Southfield Park – Watkins Road Facility
Columbus, OH
D008 CRT Glass, Dust, Filters, & Debris

Pre-Treatment Testing

Pretreatment testing which conforms to Table 10 of the Waste Analysis and Classification Plan for the appropriate phase specific to this waste will be conducted on a grab sample collected from every truckload of hazardous waste material received.

Recharacterization Sampling

A representative sample of the untreated waste will be analyzed for TCLP metals and pH for every 1,000 tons of waste intended to be shipped to MAX.

Post-Treatment Testing

For every batch of treated material, a grab sample shall be collected and tested for pH and TCLP metals (Pb).

MAX ENVIRONMENTAL

MAX Environmental Technologies, Inc.
651 Holiday Drive, Foster Plaza #5, Suite 510
Pittsburgh, PA 15220

This is to certify that based on the "Generator's Knowledge" the waste described below does not exhibit the following hazardous waste characteristics per 40 CFR (261.20-261.24).

D012 thru D017
D018 thru D043
D001/Ignitability
D003/Reactivity
D009 Mercury

In addition, the waste does not contain more than 50 parts per million PCBs and is not a listed waste [(F, K, P or U per 40 CFR (261.31-261.33)]. The following parameters do not exist in waste unless checked below:

Hazardous Constituents	CCVOC¹

B3. Land Disposal Notification and Certification Form — Max Environmental

This page intentionally left blank.

LAND DISPOSAL RESTRICTION NOTIFICATION AND CERTIFICATION FORM

Generator Name: Closed Loop Refining + Recovery, Inc.

USEPA ID Number: OHR 000167718

EPA Hazardous Waste Number:

Date of Shipment: 10/19/2020 **Manifest Document Number:** 022007913 JJ

This notification/certification is hereby submitted to MAX Environmental Technologies, Inc. in accordance with the requirements of 40 CFR 268.7.

SECTION I

☑ I have determined that the waste described on the above listed manifest is restricted in its present form and must be treated prior to land disposal. The applicable treatment standards are indicated below: *(Check All That Apply)*

	Waste No.	*Subcategory*	*Treatability Group*
___	D002 (pH≤2)	Acid	Wastewaters
___	D002 (pH≤2)	Acid	Non-Wastewaters
___	D002 (pH≥12.5)	Alkaline	Wastewaters
___	D002 (pH≥12.5)	Alkaline	Non-Wastewaters
___	D002	Other	Wastewaters
___	D002	Other	Non-Wastewaters
___	D004 (Arsenic)	N/A	Wastewaters
___	D004 (Arsenic)	N/A	Non-Wastewaters
___	D005 (Barium)	N/A	Wastewaters
___	D005 (Barium)	N/A	Non-Wastewaters
___	D006 (Cadmium)	N/A	Wastewaters
___	D006 (Cadmium)	N/A	Non-Wastewaters
___	D007 (Chromium)	N/A	Wastewaters
___	D007 (Chromium)	N/A	Non-Wastewaters
___	D008 (Lead)	N/A	Wastewaters
✓	D008 (Lead)	N/A	Non-Wastewaters
___	D010 (Selenium)	N/A	Wastewaters
___	D010 (Selenium)	N/A	Non-Wastewaters
___	D011 (Silver)	N/A	Wastewaters
___	D011 (Silver	N/A	Non-Wastewaters
___	K062	N/A	Wastewaters
___	K062	N/A	Non-Wastewaters

☐ I have determined that the waste is restricted from land disposal based on the fact that the waste is a liquid hazardous waste containing the following metals: *(Check All That Apply)*

___ Nickel At Concentrations Greater Than Or Equal to 134 mg/l
___ Thallium At Concentrations Greater Than or Equal to 130 mg/l

☐ I have determined that the waste exhibits the characteristic of corrosivity (D002), is prohibited under 40 CFR 258.37, and contains the underlying hazardous constituents indicated in Table 1.

☒ The treater will monitor the waste for the following constituents prior to land disposal:

___ Arsenic
___ Barium
___ Cadmium
___ Chromium
✓ Lead
___ Nickel
___ Selenium
___ Silver
___ Thallium
___ pH

Signature Maggie Zuniga Title Logistics Mgr.
