

EnSafe is focused on supporting our clients in the prevention and response to COVID-19

COVID-19 HEALTH & SAFETY SUPPORT SERVICES

Our approach to COVID-19 support is thoughtful, planned, and coordinated across our project team. It is rooted in open communication and a commitment to safety and quality. Whether we are developing a pandemic response plan, helping clients respond to cases, or validating the effectiveness of a client’s disinfection plan, EnSafe applies safety, innovation, creativity, and discipline.

CLEANING PROTOCOL ASSESSMENTS

Under direction of one of our Certified Industrial Hygienists, EnSafe assesses cleaning and disinfection activities conducted in response to suspected SARS-CoV-2 contamination. Our assessment activities may include one or more of the following:

- Review of proposed cleaning and disinfection procedures, including comparison to CDC cleaning and disinfection recommendations
- Onsite observations of cleaning activities to determine if such activities follow established cleaning procedures
- Wipe sampling of disinfected surfaces to evaluate the effectiveness of cleaning activities. Swab samples are analyzed for the presence of SARS-CoV-2. (As an option, surface sampling may include testing for adenosine triphosphate [ATP] with a lumimeter. ATP is an indicator of bacteria.)

COVID-19 GAP ASSESSMENT

EnSafe evaluates gaps in your facility’s COVID-19 response plan, policies, programs and practices based on current OSHA requirements and recommendations from the Centers for Disease Control (CDC), American Society of Heating, Refrigeration, and Air-Conditioning Engineers (ASHRAE) and other applicable agencies. The gap assessment includes:

- Determinations of highest areas of concern for risk of virus contraction or transmission
- Sensible engineering controls to isolate, contain, and protect workplaces of highest concern

- PPE recommendations based on task and locations
- Administrative controls regarding interaction of personnel
- Decontamination plans based on equipment, task, location, etc.
- Identifying IAQ concerns with shared HVAC systems
- Identifying “deep clean” best practices for COVID-19 affected or suspect areas
- Conformance with CDC COVID-19 prevention, containment, and response guidelines and protocols

DEVELOPMENT OF WRITTEN COVID-19 ACTION PLAN

Using information from Gap Assessment WebEx and questionnaire review, we develop a written COVID-19 Action Plan to serve as a tool for determining steps necessary to prevent, contain, and respond to COVID-19 infection, including:

- Internal & external communications
- Written policies and procedures
- Employee, Supervisor, and Visitor Training
- Routine cleaning practices
- COVID-19 Pandemic Response Plan for positive case

DISINFECTION VALIDATION SERVICES

We can develop and implement a comprehensive disinfection validation plan designed to assess the effectiveness of deep cleaning by using state-of-the-art COVID-19 swab analyses.

- Knowledge of contamination control strategies
- Full-service EHS team
- Certified Industrial Hygienists with broad industry experience
- Extensive process and emergency response knowledge
- Strong regulatory knowledge base
- Emphasis on client’s business continuity

Relevant Services

- COVID-19 Action Plan Development and Training
- Risk Assessment and Risk Management
- Employee Temperature Monitoring Support
- Respiratory Protection and PPE Training and Fit Testing
