

Delivering resolutions compliant with intricate, layered regulations

EnSafe has extensive experience and all the capabilities needed to provide complex technical assistance, regulatory interpretations, and negotiations on behalf of our government and industry-sector customers. Regulators know us as technically competent and appropriately assertive in representing our clients' best interests. As a result, we are often called upon to provide technical and scientific support to clients engaged in everything from environmental litigation and agency enforcement actions to major real estate transactions and corporate acquisitions. Often our manufacturing customers benefit from significant operating cost-savings when our documented interpretations are used to substantiate claims of regulatory exemptions.

creative thinking. custom solutions.

REGULATORY SOLUTIONS

- Environmental Compliance Reviews
- Compliance Issue Research
- Review of Environmental Opinions
- Technical Interpretation of Regulations and Data
- Technical Report/White Paper Preparation
- Critical Review and Interpretation of Proposed and Final regulations, Guidance documents, Policies, and other Similar Documents
- Regulatory Negotiations with Regulators and other Stakeholders

MEASURED APPROACH

Our approach emphasizes both correct application of the fundamental principles underlying laws and regulations and the interaction between science and engineering.

APPLYING PAST LESSONS

By understanding past and anticipating probable future responses of regulatory agencies and other involved parties, we focus our deliverables to present a balanced view of the information and suggest strategies for handling the technical issues.

VAST RESOURCES

We've honed an impressive library of work plans, health and safety plans, quality assurance plans and other reporting templates that have been reviewed by U.S. EPA and state regulatory agencies across the nation. That means time and cost savings for each of our clients.

EXPEDITED APPROVAL

"EnSafe's QAPP is approved without comment and is a model for future applicants." This quote from a USEPA Region 4 Project Officer attests to the fact that our quality regulatory reporting translates to time and cost savings.

EnSafe obtained the first ever Post Closure Order from Texas Commission on Environmental Quality, the Navy's first USEPA "Ready for Reuse" determination and the first Navy non-BRAC "Operating Properly and Successfully" determination at NWIRP McGregor.

Testimonials

"EPA would like to acknowledge the outstanding effort and the sound, professional technical consulting provided by the EnSafe team during the approximate one-year Remedial Design effort at the Macalloy Site. It has been a pleasure working with the EnSafe team during the RI/FS and RD phases of this project, and I look forward to continuing our successful working relationship during remedy implementation." - Remediation Project Manager, USEPA Region 4

"This Corrective Action Plan should be a model for similar projects in the future." - State regulatory agency project manager at closeout of stream restoration and sediment removal work for Tennessee Department of Transportation.
